

Report to: **East Sussex Health Overview and Scrutiny Committee (HOSC)**

Date: **16th September 2010**

By: **Director of Governance and Community Services**

Title of report: **Strategy for Older People's Mental Health Services**

Purpose of report: **To update HOSC on the local strategy for older people's mental health, with particular focus on dementia strategy.**

RECOMMENDATIONS

HOSC is recommended to:

- 1. Consider and comment on progress with the strategy for older people's mental health.**
 - 2. Agree whether the Committee wishes to receive further reports on this topic.**
-

1. Background

1.1 Given the older and ageing profile of the East Sussex population, older people's mental health services have been included as a priority within HOSC's work programme for some time. HOSC received reports on the local strategy for older people's mental health in June 2008 and September 2009. The last report focused on the local strategy for dementia care, following on from the publication of the first national dementia strategy by the Department of Health in February 2009. The national strategy was very broad and represented a significant challenge to local commissioners and providers of care.

1.2 HOSC noted that local NHS and social care partners were working jointly on developing the local response to the national strategy, working through the Older People's Partnership Board. Following an assessment of current services, an action plan was in development to set out the proposed approach to developing care in East Sussex. It was planned to undertake a care pathways mapping exercise in early 2010 to further develop the strategy.

1.3 East Sussex had also successfully bid to the Department of Health for funding to become a National Demonstrator site for three initiatives:

- The introduction of 3 dementia advisors and volunteer training.
- Breaks for carers of people with dementia.
- GP liaison

1.4 Alongside the wider strategy, HOSC also considered and supported, during 2008, specific proposals to reduce the number of acute assessment beds for dementia in favour of continuing investment in community based assessment and care. The proposals also involved relocating remaining acute assessment beds from Milton Court in Eastbourne to the Beechwood Unit in Uckfield. This was intended to be a medium term measure to enable Milton Court to develop as a social care-led dementia care facility and the intention was to relocate the assessment beds to Eastbourne at some point in the future once suitable premises became available.

2. Local Developments

2.1 An update on local strategy for older people's mental health services, with a particular focus on dementia strategy, is attached at appendix 1. Also attached at appendix 2 is the latest version of the East Sussex dementia action plan which sets out in more detail the various activities underway to develop dementia awareness, diagnosis and care in the county.

2.2 Appendix 1 also includes an update on the situation with acute assessment beds at the Beechwood Unit. Sussex Partnership NHS Foundation Trust, as the provider of this service, has also supplied some information on the usage of the unit during the last year – this is attached at appendix 3.

2.3 Martin Packwood, Joint Commissioning Manager for Mental Health, NHS East Sussex Downs and Weald/NHS Hastings and Rother/ESCC Adult Social Care and Neil Waterhouse, Service Director, Sussex Partnership NHS Foundation Trust will present the updates to HOSC and take questions.

3. Issues to consider

3.1 HOSC may wish to explore themes such as:

3.2 Funding for dementia services

- How the resources available for delivering the action plan may be affected by the challenging financial climate.
- What planning is underway for the sustainability of services funded through the Department of Health pilot programme and the Strategic Health Authority funding in 2010/11.
- How the benefits of new approaches to dementia care are being evaluated in terms of value for money, and whether this will provide evidence to support continued investment (for example, the benefits of dementia care advisors or 'in-reach' services to nursing/residential homes)
- The scope of the collaborative service redesign process underway between NHS and social care partners.

3.3 Service user and public involvement

- The key issues raised by service user and carer representatives at the care pathways mapping event, and how have these been addressed in the action plan.
- How the local health promotion campaign will be developed and evaluated.

3.4 Early diagnosis

- Whether there has been progress in increasing the rates of diagnosis and reducing variation between GP practices.
- The status of memory clinics/services across the county and how far these have developed into a consistent county-wide approach.

3.5 Hospital care

- The approach to reducing lengths of stay and improving hospital care for people with dementia.

Report to the East Sussex Health Overview and Scrutiny Committee Older People's Mental Health Services

Background

HOSC last received an update on strategies for improving mental health services for older people in September 2009.

This paper aims to provide a further progress report on the actions taken over the last year, and wherever possible to report directly on actions that were then being planned.

HOSC will be aware from its recent involvement in the public consultation on mental health services in East Sussex, that it is planned that older people with 'functional' illnesses (such as depression), will in the future be provided with services consistent with adults of working age who experience such problems.

HOSC has asked that it be updated on these development and arrangements have been agreed to facilitate this. As a result, this paper focuses on the National Dementia Strategy and its implementation in East Sussex.

East Sussex Dementia Strategy

A detailed Dementia Strategy Action Plan was completed in late 2009 and was approved by the East Sussex Older People's Partnership Board in November. The Plan is regularly updated to reflect changes in approach and report progress. The latest version (updated in May) is attached for information.

The proposed 2-day care pathway mapping workshop took place in January as planned, and was attended by over 70 people who live and / or work with people with dementia. Outcomes were written up and widely circulated for comment before being adopted in April.

Implementation arrangements have been updated with a new dedicated Joint Commissioning Group being established under the chairmanship of the PCTs' Deputy Chief Executive, and expanded membership (including for example GPs) to reflect the wide range of objectives of the strategy.

The Group has determined its priorities for 2010/11 and receives regular reports on progress being made.

Progress to date

As a national demonstrator site for piloting dementia advisors, East Sussex saw the successful launch of this new service in April. It is provided in partnership with the Alzheimer's Society who employ 3 advisors who also train and supervise volunteers to support people with dementia and their carers who need ongoing support to understand the information provided and accessing services to which they have been signposted by the dementia advisor.

In parallel with this development Adult Social Care services commenced its 'breaks for carers of people with dementia' (respite) service, which delivers a range of flexible two hour breaks enabling carers to pursue their own interests or needs whilst their cared for is supported.

The planned expansion of the psychiatric liaison service also went ahead in April 2010, providing expert care and support to patients being admitted to general acute hospitals who also have dementia. This service now also covers mainstream intermediate care services.

Priorities for 2010/11

A priority for this year remains increasing rates of early diagnosis of people with dementia, and the development and commissioning of a high volume service to address the approximately two thirds of people who it is predicted may have dementia, but do not currently appear on primary-care based disease registers (under the Quality and Outcomes Framework or 'QOF').

An outline specification has been agreed. This involves expanding the role of dementia advisors to whom GPs can then refer patients for pre-diagnostic information, advice and support, thereby to hopefully help overcome the stigma associated with coming forward for a formal diagnosis – a significant factor in under-reporting.

Formal diagnosis would then be provided based on preparatory work by referring GPs, to include cognitive screening, blood tests, medication review and the ruling out of physical causes of symptoms. At the dementia clinic, outcomes from further, more sensitive, cognitive tests and possibly results from CT scans (as necessary), would be brought together for specialist determination of a dementia diagnosis.

Where prescribing of anti-dementia drugs is indicated, these would be initiated at the clinic, and GPs advised of the outcome of the diagnostic process, repeat-prescribing arrangements and review, with the aim that more patients are placed on QOF registers and benefit from the associated reviews of their condition as it progresses.

Dementia advisors would also continue to provide information, advice and support to people following diagnosis, and sign-post / refer people to available specialist services, as these become necessary as a result of the course of the illness.

Commissioning this important new service, which will build upon existing initiatives such as the Memory Assessment and Support Team (MAST) and existing memory clinics, will be a challenge in the context of very limited resources being available in future years. A collaborative process of service re-design has therefore begun between the PCTs, Sussex Partnership Trust and Adult Social Care services, to identify where savings can be released from across the whole health and social care system.

Transformation Funding

As a result of a successful Sussex-wide bid to the Strategic Health Authority for additional investment funds for dementia, £1.5 million is being made available in 2010/11 for a number of initiatives.

This reflects the priority being accorded to the development of dementia services in Sussex, and provides a real opportunity for these to be transformed in line with national and local strategic objectives.

These funds will be used to:

- establish the proposed early diagnosis services (described above)

- expand the role of dementia advisors
- quantify the opportunity to improve general hospital care of older people being admitted who have dementia, and the potential to release funds by reducing protracted lengths of stay
- pilot a dementia care 'in-reach' service for nursing and residential care homes, initially focusing on those with high admission rates to hospital in order to reduce these rates and release savings
- run a local health promotion campaign to reduce the stigma associated with dementia and encourage people to come forward for diagnosis
- establish an academic dementia research unit at Brighton and Sussex University Hospitals Trust

The challenge in the coming year will be to successfully grasp the opportunity to transform dementia services, and to realise not only the clinical but financial benefits of investment, and thereby ensure its sustainability.

Beechwood (Uckfield) – In-patient Dementia Assessment Unit

HOSC members will recall that they had previously supported the movement of dementia assessment beds from Milton Court in Eastbourne, and their consolidation at the Beechwood unit in Uckfield, which enabled investment in community services to be sustained.

This move also enabled Adult Social Care services as its owner, to re-develop Milton Court (now Grange) as a specialist Dementia Care Centre with day services, respite beds and other resources.

HOSC also approved these changes on the understanding that assessment beds would be re-located back to Eastbourne in due course, and whilst this remains the position of the PCT, there are no immediate or well developed plans for undertaking this.

Having recently been involved in the public consultation on mental health services in East Sussex, HOSC will appreciate that there may be a number of opportunities for re-location arising from proposals to reconfigure in-patient mental health beds for adults.

Whilst these opportunities are being explored, options are at a very preliminary stage of development indeed, and would also need to take in to account impacts on NHS services and sites retained in the Wealden area.

Once the feasibility of any options for re-locating dementia assessment beds to Eastbourne have been established, HOSC can be assured it will be consulted on its views before any decisions are taken.

EAST SUSSEX DEMENTIA ACTION PLAN 2009 - 2012

NOVEMBER 2009 – MAY 2010 UPDATE

East Sussex Dementia Action Plan 2009-12

Context:

This multi agency plan has been produced in direct response to the publication in February 2009 of the National Dementia Strategy 'Living Well with Dementia'. It is underpinned by the findings contained within the East Sussex State of Readiness Review published in April 2009.

East Sussex State of Readiness Review Key Findings:

- Many of the building blocks for creating a comprehensive care pathway for older people with dementia were in place in East Sussex
- These different parts were not always clearly understood and communicated either between organisations, or to the public, and the range of available services could therefore be better co-ordinated to greater effect
- Should all aspects of an integrated care pathway be fully developed and operated in an effective and co-ordinated way, it was likely that significant investment would be required at all stages in response to currently unmet need

The Action Plan is constructed in such a way that it outlines actions underway or actions to be taken in each of the 17 objectives identified in the National Dementia Strategy. The National Strategy is (quite-rightly) extremely wide-ranging in its scope, and as such sets down a significant challenge to commissioning and provider organisations to work across their traditional internal as well as external boundaries of responsibility. This plan should not be viewed in isolation. Rather it links with and is dependant on the implementation of wider organisational strategies such as Putting People First and the Carers Strategy and the development of integrated and whole systems working within East Sussex.

Accountability:

This plan has been agreed by senior officers of the statutory organisations tasked with commissioning and providing services for people with dementia and their carers. A progress report will be provided to the Older Peoples Partnership and Mental Health Partnership Boards on a six monthly basis or as requested.

National Dementia Strategy (East Sussex) Action Plan 2009-2012

Number	National Dementia Strategy Objective	Key Outcomes	Actions	Timescale	Responsible Organisation
1	Improving public and staff awareness	<ul style="list-style-type: none"> • Increased prevention of dementia • Promote social inclusion and combat stigma • Dignity for people with dementia • Knowledge building on part of public to ensure viability and effectiveness of least intrusive social care interventions in conjunction with person's social network 	<p>Commission Public Health / Health Promotion campaigns in, libraries, community organisations, building on National Awareness Raising Programmes.</p> <p>Develop joint communication plan to raise awareness and understanding of dementia. Briefing Paper for the HOSC
16th September 2010

Paper prepared by: Neil Waterhouse, Service Director

Impact on move of assessment beds for dementia to Beechwood

Since the Milton Court closure and refurb, the HOSC will be aware that these specialist dementia assessment beds were moved to Beechwood. We briefed the HOSC on the impact a year ago. I can confirm the following in relation to this year's impact.

27 patients outside of the local area were admitted to Beechwood. This is broken down into the following:

- 12 patients from Seaford/Newhaven
- 1 patient from Hastings
- 14 patients from Eastbourne

All these patients and carers have been supported in relation to visiting and travelling and we have received no complaints from carers or relatives during this past year.

Beechwood is a specialist unit. It is able to provide a high standard of quality for the assessment of people with dementia and as such is now seen by patients and their relatives as providing this level of quality.

In addition no North Wealden patients have had to travel outside the area i.e. Hastings.

I would be happy to answer any questions the HOSC has in relation to the above information.

Neil Waterhouse
Service Director
