# Recommendations

<p><b>1</b></p>	<p>If a decision is taken to close the Eastbourne Station Health Centre, the East Sussex Clinical Commissioning Group (CCG) should liaise with the current provider at the appropriate time to understand what opportunities there are for potential employment of the Eastbourne Station Health Centre staff to minimise any loss of available healthcare staff in the local system, and mitigate the impact on staff members themselves.</p>
<p><b>2</b></p>	<p>The Review Board recommends that, if the decision is taken to close the Eastbourne Station Health Centre, the communications and engagement plan for Integrated Urgent Care (IUC) must help improve residents' understanding of how they can access urgent care in their local communities.</p> <p>Communications should focus on the benefits of the new service to patients and should therefore emphasise the wider variety of booked appointments and the potential additional convenience of telephone and video consultations, for example:</p> <ul style="list-style-type: none"> <li>• The enhanced NHS 111-Clinical Assessment Service (CAS) that includes where appropriate the ability to speak to a clinician via NHS 111 for initial medical advice and book a same day face-to-face appointment at either the Urgent Treatment Centre (UTC), their local General Practice (GP), a Primary Care Improved Access Hub (PCIA) or a community pharmacy.</li> <li>• If people cannot attend a GP appointment during core hours, they have the option of attending early morning, evening and weekend appointments at a (PCIA) hub, or potentially their own GP practice both face-to-face or over a video or phone consultation (subject to current restrictions in place due to Covid-19 that are planned to be lifted in March 2021).</li> <li>• Patients can order urgent prescriptions over the phone via 111 and have them delivered to a community pharmacy.</li> <li>• Patients with self-care illnesses can now book to see a pharmacist via 111.</li> </ul> <p>Publicity about the above options for patients should begin well in advance of any closure of the Eastbourne Station Health Centre to ensure people are aware of the new services available to them.</p> <p>The CCG should also encourage GP practices to inform their patients about these changes, for example, by placing advertisements in waiting rooms or on their websites and advising patients when they call their GP practice about accessing 111, for example for an urgent prescription, if it is clinically appropriate to do so.</p>
<p><b>3</b></p>	<p>The Review Board recommends that the CCG should engage with Primary Care Networks (PCNs) to encourage them to consult with their Patient Participation Group, if they have not done so already, to find out what extended hours services patients would find most helpful, if current utilisation is low.</p>

4	<p>The Board recommends that the CCG investigates the feasibility of commissioning a drop-in clinical service for homeless and rough sleepers in the town centre ahead of the publication of its Decision Making Business Case.</p>
5	<p>The Board recommends that the CCG ensures that if the decision is taken to close the Eastbourne Station Health Centre, the Care Navigators employed to assist people target any homeless and rough sleepers and advise them of the Rough Sleepers Initiative and any other available services.</p> <p>Care Navigators should also ensure they focus on other vulnerable groups such as people living in temporary accommodation, young carers, or those with English as a second language to ensure they understand the new Integrated Urgent Care system and are confident they can access it. They should also be in a position to use social prescribing to help ensure vulnerable groups are supported to access non-clinical support from community based services.</p>
6	<p>The Board recommends that if the decision is taken to close the Eastbourne Station Health Centre, the CCG should contact language schools and ensure that they are aware they should advise their students to use 111 as the first point of contact if they feel ill.</p>
7	<p>If the decision is taken to close the Eastbourne Station Health Centre, the CCG should ensure that assistance is provided to help people register at a new GP practice. This includes:</p> <ul style="list-style-type: none"> <li>• Ensure Care Navigators and letters to patients advise that the local practice they have been allocated will have a full range of primary care services available.</li> <li>• Ensure Care Navigators and any letters to patients explain patient choice and that people may choose a practice in the town centre or nearby to where they live.</li> <li>• Ensure the CCG Allocations team is able to assist with the potential influx of contact from patients registering at new practices and can help patients register at a preferred practice where it has a patient cap in place.</li> <li>• Ensure that the homeless patients registered at the Eastbourne Station Health Centre are all registered at new practices elsewhere in the town centre.</li> <li>• Ensure that the Care and Protect service and Rough Sleepers Initiative can register homeless and rough sleepers at alternative town centre practices in the future.</li> </ul>

## Background

1. Eastbourne Station Health Centre was opened at Eastbourne Station in November 2009. The facility contains a walk-in centre – which provides primary and urgent care services to patients without an appointment – and a GP practice with a list of 3,194 patients (as of August 2020).
2. NHS England has in recent years raised concerns that many people are using Accident & Emergency Department (A&E) for non-emergency healthcare when they should be using urgent care or same-day primary care services. A key factor driving this trend, according to data compiled by NHS England, appears to be a widespread confusion amongst the public about the array of urgent care services available that leads individuals to conclude that A&E seems like their only option. In response, NHS England has required local Clinical Commissioning Groups (CCGs) to develop a new integrated urgent care system in their local area comprising primarily of Urgent Treatment Centres (UTCs), an enhanced NHS 111 service, and evening and weekend GP appointments.
3. The proposals developed by the CCGs in East Sussex for an integrated urgent care service in the county were presented to the East Sussex Health Overview and Scrutiny Committee (HOSC) in March 2018. The CCGs proposed to open UTCs at both the Eastbourne District General Hospital (EDGH) and Conquest Hospital in Hastings. The plans also called for the closure of the walk-in centres at Eastbourne Station Health Centre and Hastings Station Plaza, respectively, on the grounds that they would contain duplicate services once the new integrated urgent care service was in place.
4. The HOSC agreed that the proposal to close the walk-in centres constituted a substantial variation to services, requiring formal consultation with the Committee via a dedicated Review Board.
5. The CCGs subsequently paused the process in June 2018 and revised their proposals during 2019. The revised proposals recommended the conversion of the Hastings Station Plaza to a nurse-led integrated primary care hub. However, having reviewed the evidence available, the CCGs concluded it would proceed with the proposed closure of the Eastbourne Station Health Centre.
6. The proposal to close the Eastbourne Station Health Centre was put out to public consultation by Eastbourne, Hailsham and Seaford (EHS) CCG in February 2020. EHS CCG merged with High Weald Lewes and Havens and Hastings & Rother CCGs in April 2020 to form the East Sussex CCG, which is now leading the consultation process.
7. The consultation was paused due to the Covid-19 pandemic before it was completed but recommenced on 3<sup>rd</sup> August 2020 for a period of six weeks. The HOSC Review Board resumed its review of the proposals at the same time.

### HOSC Review Board

8. The regulations governing substantial variations to services allows a HOSC to consider whether a CCG's final decision is in the best interests of the health service for the residents of the local area. Before a CCG's Governing Body takes its decision, a HOSC may submit a report and recommendations in relation to the proposals for the CCG Governing Body to consider alongside its final decision-making business case (DMBC).
9. HOSC established a Review Board to carry out a detailed review of the proposals in March 2018 comprising Cllrs Colin Belsey, Mary Barnes, Amanda Morris and Mike Turner and Jennifer Twist (community and voluntary sector representative); the Review Board elected Cllr Belsey as the Chair.

10. HOSC agreed on 26 September 2019 that the proposals to convert Hastings Station Plaza to an integrated primary care hub no longer constituted a substantial variation to services, meaning they no longer formed part of the Board's remit.
11. The Review Board has reached its conclusions and recommendations on the proposed future of the Eastbourne Station Health Centre by examining the following lines of enquiry:
  - Whether alternative proposals are viable.
  - Whether the Eastbourne Walk-in Centre (WIC) is a duplicate of services available as part of the new integrated urgent care system.
  - Whether services will be in place to assist homeless and other vulnerable groups who currently use the WIC.
  - Whether the Eastbourne Station Health Centre GP list can be successfully dispersed into the nearby GP practices.
12. The Review Board agreed to exclude from consideration:
  - A detailed look at urgent care proposals in the former High Weald Lewes Havens CCG area
  - The procurement process for other urgent care services such as NHS 111, UTCs and Out of Hours GPs.
  - The proposals around the future of the Hastings Station Plaza.
13. The Review Board met nine times over the course of more than two years.
14. This report sets out the evidence the Board considered, along with its conclusions and recommendations.

## Context for the proposals

### Plans for integrated urgent care nationally

15. NHS walk-in centres began opening in January 2000 and by 2010 more than 230 had opened across England. The aim of walk-in centres was to improve patients' access to primary care, modernise the NHS to be more responsive to patients' busy lifestyles, and offer patients more choice.<sup>1</sup>

16. There is no standard definition of a walk-in centre or the services they offer. Typically they provide routine and urgent primary care for minor conditions, ailments and injuries with no requirement for patients to pre-book an appointment or to be registered at the centre or with any GP practice; they are also open for longer hours than the typical GP practice, including after normal working hours and on weekends; and are often open at a convenient location for people who commute for work, such as at a train station or in a town centre.

17. Between 2010 and 2013, 50 walk-in centres were decommissioned and largely replaced by urgent care centres co-located at hospital A&E departments. Monitor, the NHS regulator that is now part of NHS England, was tasked with carrying out a review of walk-in centres in 2013.

18. Following the review by Monitor, NHS England set out in its Five Year Forward View, published in October 2014, the need over the next five years for urgent and emergency care services to be redesigned and integrated to ensure there was a consistent service across England.<sup>2</sup>

19. The Next Steps on the NHS Five Year Forward View, published by NHS England in March 2017, highlighted that some hospital A&Es were struggling to cope with rising demand in part because up to 3 million of the 23 million A&E visitors in 2016/17 could have had their needs addressed in other parts of the urgent care system<sup>3</sup>.

20. The report identified that one of the reasons for people turning to A&E when they did not need to was because it seemed like their best or only option.<sup>4</sup> This was due to there being a "confusing mix" of walk-in centres, minor injuries units and urgent care centres available in different localities.<sup>5</sup> In response, the report called for the NHS in England to develop a new integrated urgent care service by 2018, including<sup>6</sup>:

- An enhanced NHS 111 service with the ability to book people into urgent face to face appointments and provide a proportion of callers with advice from a clinician via a Clinical Assessment Service (CAS).
- Evening and weekend General Practitioner (GP) appointments available to 100% of the public.
- Urgent Treatment Centres (UTCs) with a core set of care standards that included being open 12 hours a day, seven days a week; be GP-led; include diagnostic facilities such as an X-ray machine; and have bookable appointments through 111.

---

<sup>1</sup> Walk-in centre review: final report and recommendations, Monitor, February 2014, p.4

<sup>2</sup> Five Year Forward View, NHS England, October 2014

<sup>3</sup> The Next Steps on the NHS Five Year Forward View, March 2017, p.14

<sup>4</sup> Ibid. p.14

<sup>5</sup> Urgent Treatment Centres – Principles and Standards, NHS England, July 2017. p.4

<sup>6</sup> Ibid. p.15

21. The NHS Long Term Plan, published in January 2019, set out the progress so far in developing integrated urgent care and included a pledge to begin delivering 111-CAS from the 2019/2020 financial year and to fully implement the UTC model by Autumn 2020.

22. The Long Term Plan also set out the requirement for neighbouring GP practices to establish Primary Care Networks (PCNs) by 1 July 2019 of 30,000-50,000 patients to provide additional services in return for dedicated additional funding from their local CCG. This included funding to deliver additional extended access appointments on weekends and evenings from all practices within the PCN. The Plan also required NHS 111 to be able to refer patients to community pharmacies for consultation, where appropriate.

23. CCGs must have regard to any guidance on commissioning published by NHS England, under the National Health Services Act 2006<sup>7</sup>. Principle 6 of the NHS Constitution also commits the NHS to “providing best value for taxpayers' money and the most effective, fair and sustainable use of finite resources.”<sup>8</sup>

### *Comments*

24. The Review Board agrees with the principle that patients should not attend hospital A&E Departments when other more appropriate options are available. The Board also is mindful that there is a clear, national drive towards the creation of a new, integrated urgent care system and the specification for this service is quite prescriptive.

### ***Eastbourne Station Health Centre***

25. The Eastbourne Station Health Centre is located inside Eastbourne Station. It is a relatively small location and the Centre employs approximately 16 clinical and non-clinical staff across both a walk-in centre (WIC) and a GP practice. On a typical day, there may be two doctors, one or two nurses, and around three admin staff working on site across both services.

26. Eastbourne Station Health Centre is run by Integrated Care 24 (IC24) – a social enterprise providing urgent care services – and was opened in November 2009. The contract between the CCG and IC24 for the service was initially for five years but has subsequently been renewed on an annual basis.

### **GP Practice**

27. The contract for the Eastbourne Station Health Centre is an Alternative Provider Medical Services (APMS) contract and does not include the full range of services provided by a GP Practice on a General Medical Service (GMS) contract. Although the APMS contract does mean that both the GP practice and Eastbourne Walk-in Centre are open for longer hours.

28. According to NHS Digital, as of August 2020, the number of patients registered at the practice is 3,194. This is compared to 3,625 in April 2018.<sup>9</sup> IC24 informed the Board that the patient list had been closed for some time but had recently been reopened.

29. The number of people on the patient list with multiple or complex health needs as of April 2019 is shown in the table below.

---

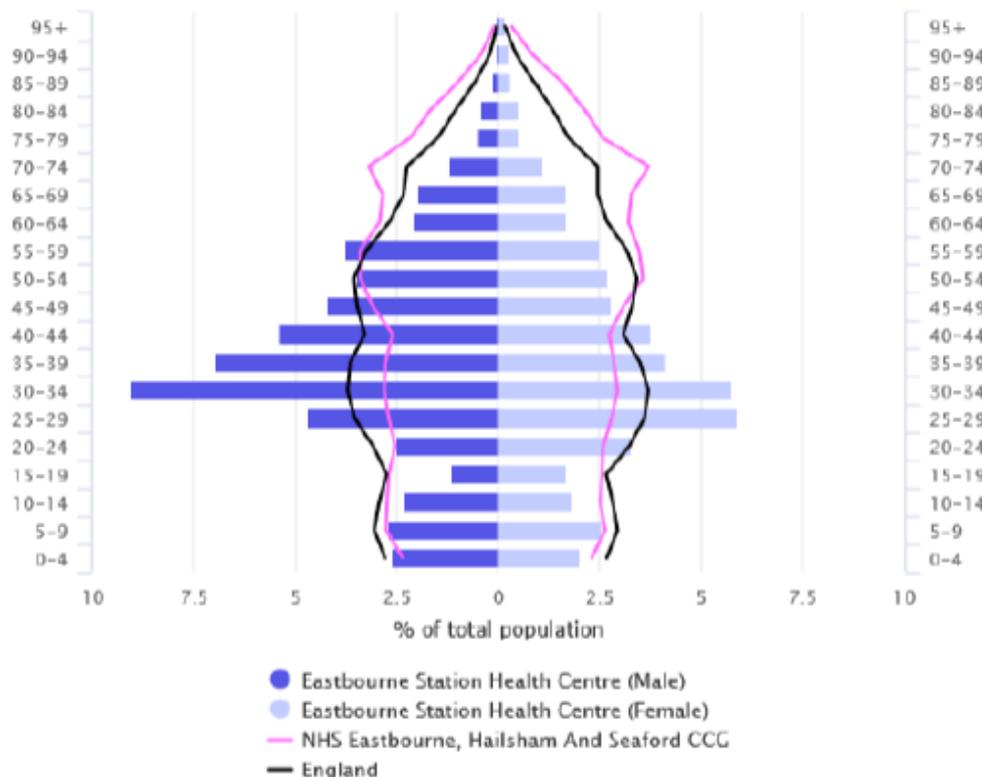

<sup>7</sup> , National Health Services Act 2006, Section 14Z8

<sup>8</sup> Handbook to the NHS Constitution for England, Department of Adult Social Care and Health, Updated 28 October 2019

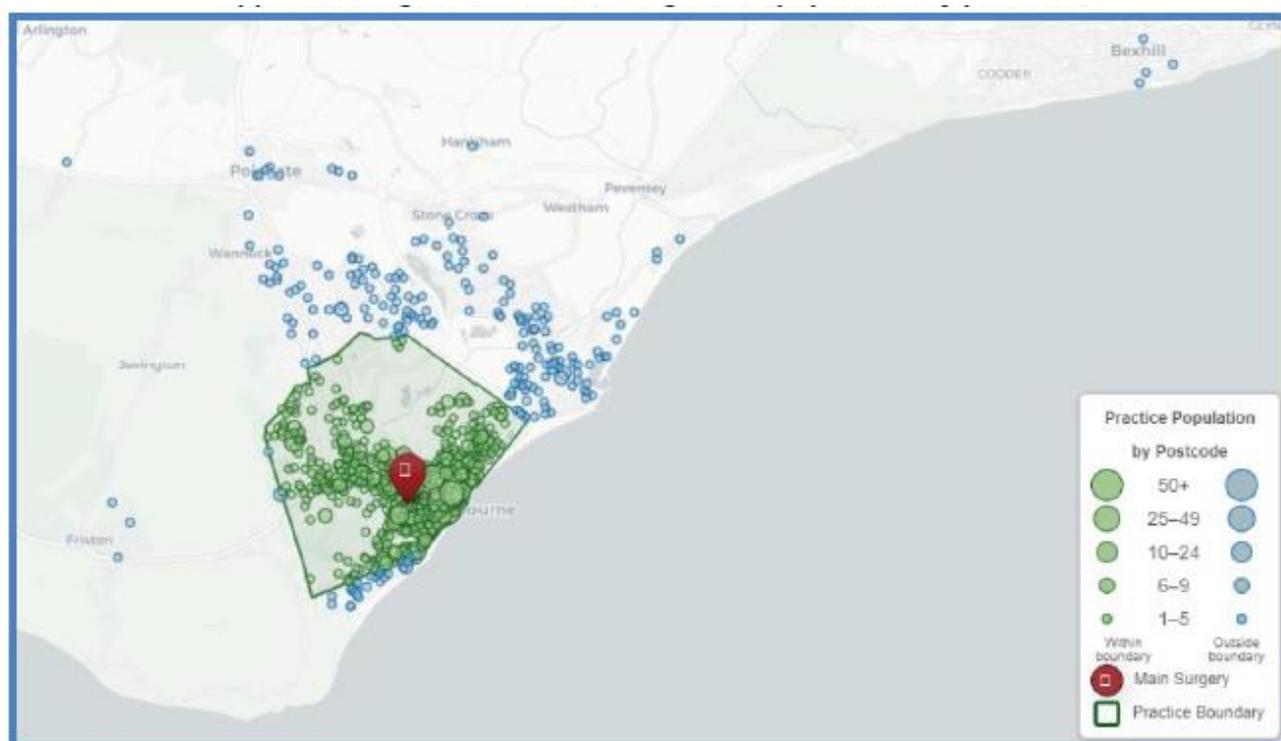

<sup>9</sup> Patients Registered at a GP Practice August 2020, NHS Digital

Indicator	Number	Percentage
<b>Patient list size (raw population, i.e. not weighted)</b>	<b>3312</b>	<b>n/a</b>
Number for whom English is not their first language	1265	38.2%
Registered Homeless patients (not including those sofa surfing etc)	18	0.5%
Coded Diagnosis of personality disorder	55	1.7%
Coded diagnosis of mental or depression	83	2.5%
Number of registered children on child protection	21	0.6%
Number of carers	47	1.4%
Number recorded as having a disability	249	7.5%
Coded diagnosis of substance misuse	102	3.1%
Coded diagnosis of having learning disabilities	5	0.2%
Coded diagnosis of Asthma	129	3.9%
Coded diagnosis of COPD	64	1.9%
Coded diagnosis of Cancer	40	1.2%
Coded diagnosis of CHD	44	1.3%
Coded diagnosis of Diabetes	98	3.0%
Coded diagnosis of Stroke/ TIA	28	0.8%
Coded diagnosis of CKD	28	0.8%
Coded diagnosis of Heart Failure	16	0.5%

30. The age and sex bands of the GP list is shown in the graph below.

31. The map below shows the distribution of the Eastbourne Station Health Centre registered population by postcode.

32. According to the CCG, this data shows that:

- There is a relatively low number of patients with multiple or complex health needs and long-term conditions registered with the practice.
- In comparison to other practices in Eastbourne, the current registered list is disproportionately made up of working age adults, i.e. those aged 18 to 64 years make up to 58% of the registered list.
- The majority of people registered with the practice live in the areas surrounding Eastbourne Station Health Centre. Although, a significant number of people who are registered at Eastbourne Station Health Centre reside across the rest of Eastbourne and the surrounding areas.<sup>10</sup>

33. The Board heard from IC24 that although the population was young, many were from a deprived area. IC24 estimated that about one third of patients were either young carers, had a substance misuse problem, or were homeless or in temporary accommodation. IC24 also highlighted that one third of patients have English as a second language.

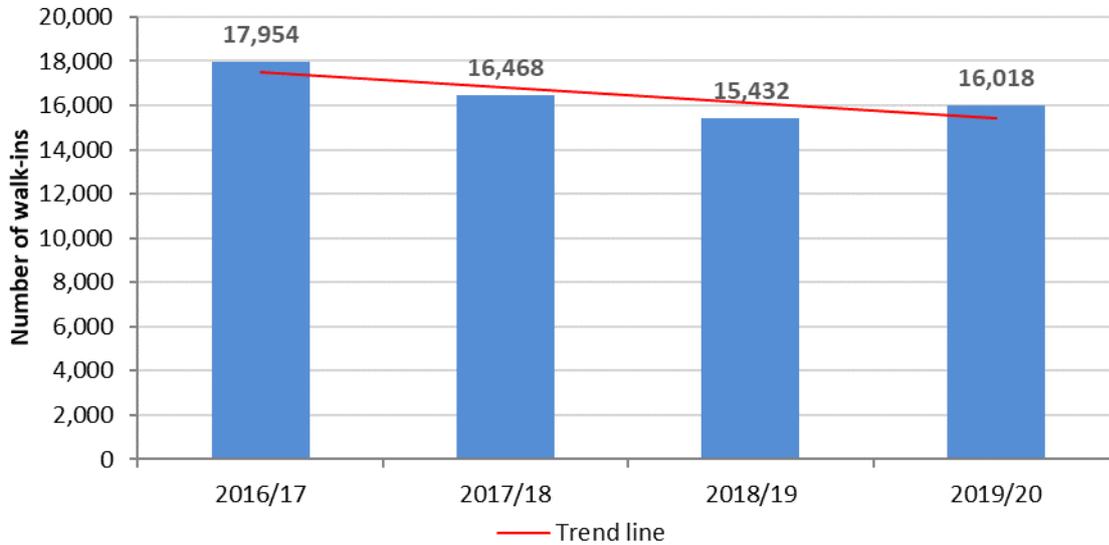

### Walk-in Centre

34. The Eastbourne WIC operates from 8:00am to 8:00pm (with reduced hours on Christmas Day), seven days a week, 52 weeks a year. The WIC is a GP-led service that is open to any member of the public, including those registered elsewhere or those not registered with any GP practice.

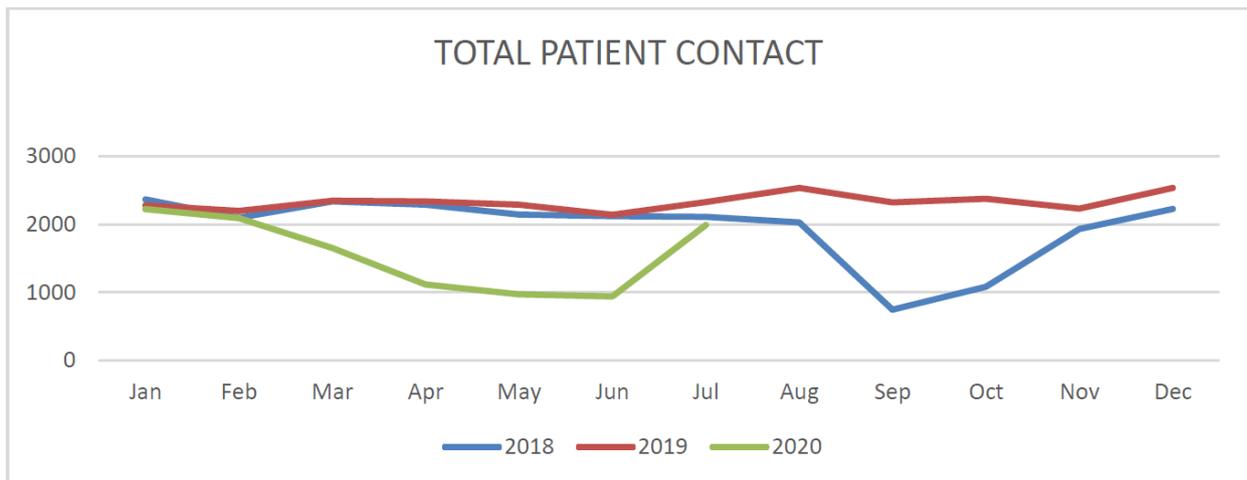

35. The Board was provided with WIC usage data from 2016/17 to 2019/20. The usage data shows a continued decline in the use of the WIC, albeit with a small increase for 2019/20.

<sup>10</sup> The Future of Eastbourne Station Health Centre Pre-Consultation Business Case (PCBC), EHS CCG, 29 January 2020

### Eastbourne WIC activity per financial year

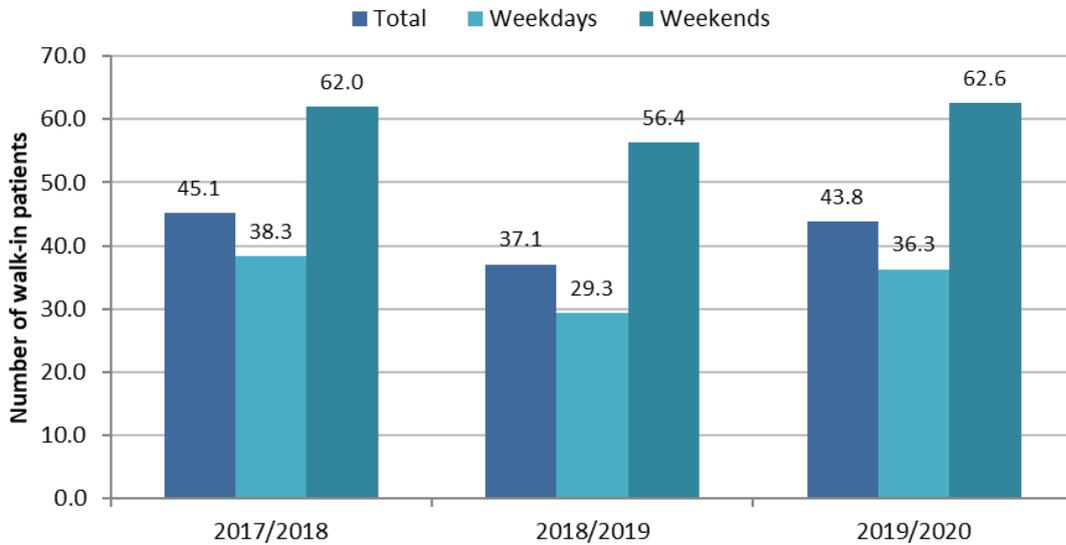

36. IC24 provided the Board with its own data showing usage for the past three years of both walk-in and registered patients.

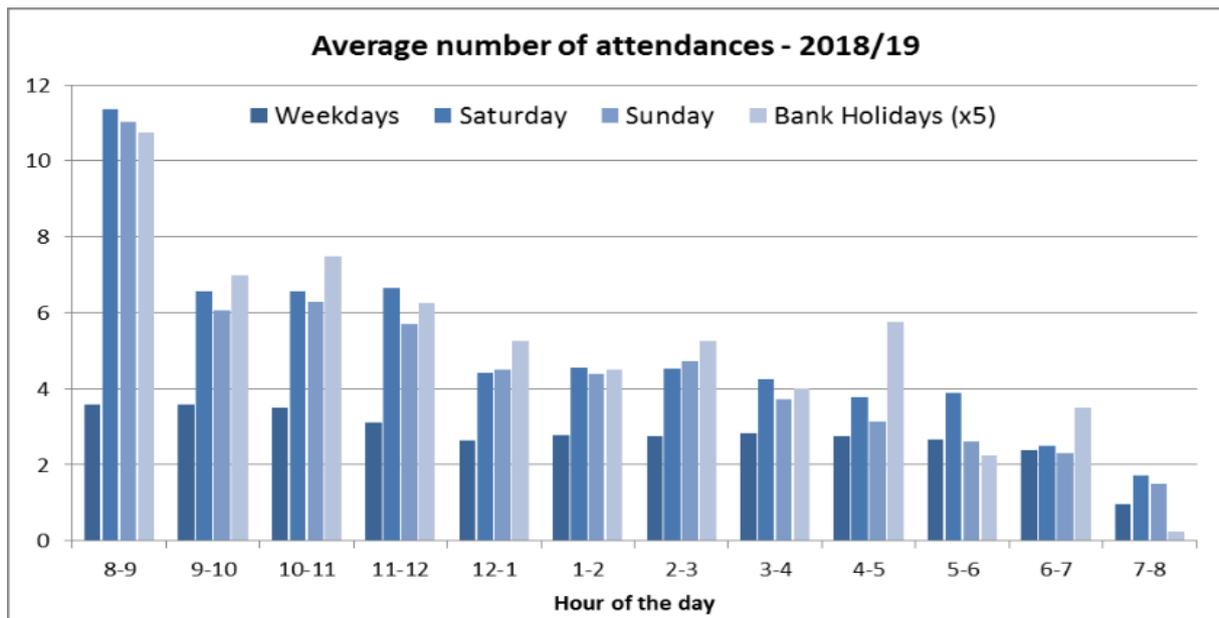

37. The Board heard from IC24 that the two dips in the graph are due to the flooding of the Eastbourne Station Health Centre in September 2018 and the impact of the Covid-19 pandemic during April and May 2020, respectively. IC24 says usage is now close to pre-Covid-19 levels, with 1,870 contacts across both the WIC and GP practice up to 27<sup>th</sup> August.

38. The CCG provided the Board with average use per day data. This also shows an increase between 18/19 and 19/20 but overall decline since 2017/18.

## Eastbourne WIC activity : Average Per Day

39. The Board saw the following graph showing the hour of the day people attend the WIC.<sup>11</sup>

40. According to the CCG, the most common prescription during 2018/19 was for antibacterial drugs, with 3,570 prescriptions issued out of a total of more than 9,200.<sup>12</sup>

41. The Board also heard how the CCG carried out a clinical audit of the Eastbourne WIC over three days in September 2018 to understand the types of users. The Board saw evidence from the CCG that:

- Over half of patients attending lived in the closest postcode areas to the WIC

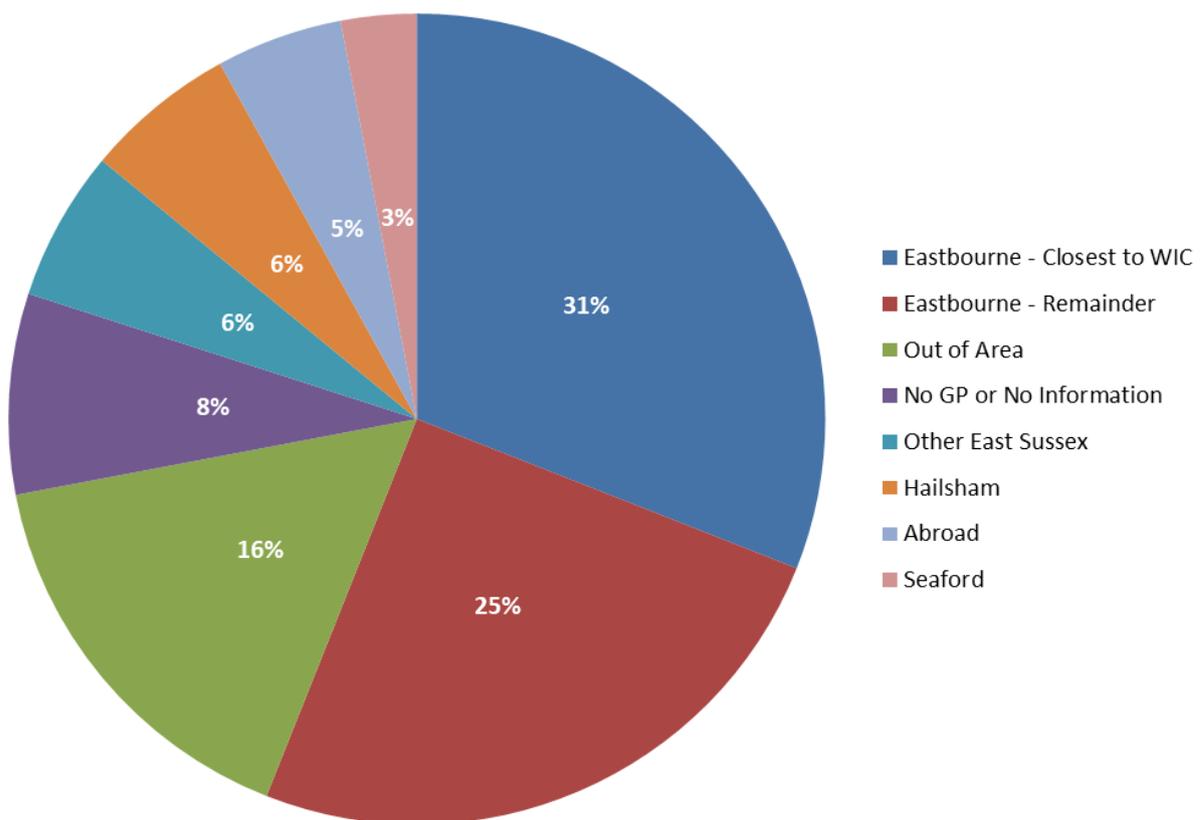

<sup>11</sup> Urgent Treatment Centres and walk-in centres developments – Informal progress update to the HOSC Review Board, EHS CCG, 26 July 2019

<sup>12</sup> The Future of Eastbourne Station Health Centre Pre-Consultation Business Case (PCBC), EHS CCG, 29 January 2020, Appendix 4

- Most patients attending the WIC (43%) were aged between 26 and 65
- 1.5% of people attending had declared disabilities
- 11% of patients in Eastbourne were listed as living in temporary accommodation; all other patients live in permanent accommodation; none were asylum seekers or of no fixed abode.
- All patients were classed as non-vulnerable
- 5% of patients at Eastbourne had mental health or substance misuse issues, or a combination of the two.
- The outcome of the visit for 65% of patients was a prescription and for 21% it was self-care. 3% of patients were referred to the A&E department for emergency treatment.

42. The clinical audit showed that after triage, 64% of patients were seen by a GP, 30% by an Advanced Nurse Practitioner (ANP), 2% by a nurse, and 4% by a Health Care Assistant.

43. The pie chart below shows activity per GP locality and shows that 56% of users of the walk-in centre are registered at a GP practice in Eastbourne. It shows 16% of patients who use it are from out of the area, whilst 8% of contacts are with patients who do not have a GP practice or the details of the registered practice were not recorded.

44. IC24 informed the Board that during August 2020, it had seen 110 patients at the WIC who were not registered with a practice and 111 who were attending from out of the area, out of 1,870 total contacts across both the WIC and GP practice. IC24 also told the Board that they are seeing an increase in patients who claim they cannot be seen at their local practice.

45. South East Coast Ambulance NHS Foundation Trust (SECAmb) estimates that prior to the Covid-19 outbreak, the NHS 111 service referred around 170 patients per month to the WIC.

*Usage during COVID-19*

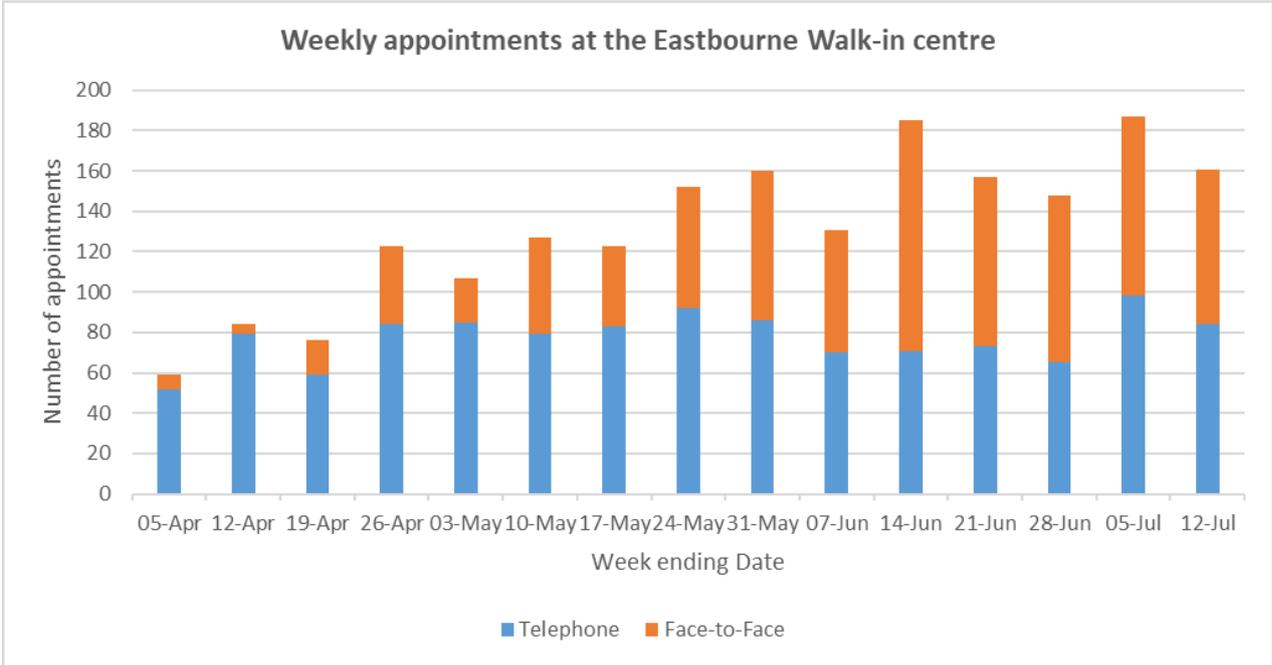

46. In line with national guidance issued in response to the Covid-19 pandemic, the Board heard that changes made to the operation of the Eastbourne Station Health Centre, have resulted in people not being able to use the facility as a “walk-in” service. Instead patient flow has been managed in the following ways:

- Registered patients are remotely triaged by telephone/video call. If they require a face-to-face appointment, they are then offered a pre-arranged time slot with a GP or a nurse.
- Walk-in patients are also triaged by telephone/video consultation and booked subsequent face-to-face appointments with a GP or nurse.

These changes are still in place as at the time of this report.

47. The Board saw evidence from the CCG that the activity at the Eastbourne WIC reduced in comparison to the pre-Covid-19 period during April and May. The data also shows that usage has increased during June and July. IC24 claimed that usage during August so far is close to pre-Covid-19 levels at 1,870 total contacts, but SECAmb claimed referrals by NHS 111 were down to 44 for the month.

48. The CCG provided the following graph to illustrate usage.

49. Overall average figures during this period for both the WIC and GP practice were:

- 132 all contacts per week (an average of 19 per day)
- 77 telephone appointments
- 55 face-to-face appointments.

50. The majority of face-to-face appointments are undertaken by a practice nurse, with an average of 79% per week compared to 21% by GPs. IC24 said that many patients prefer the telephone contact.

## Comments

51. The Board notes that people have not been able to use the WIC since lockdown began in April. Numbers of users of the service now appear close to back to normal, however, people are still accessing face to face appointments by telephone or video triage and receiving a face-to-face appointment at a pre-arranged time slot.

## CCG proposals

52. The Board has heard from the CCG that it believes the Eastbourne WIC service is now duplicated by several new and additional services that have been established since the WIC opened in 2009, for example, additional Primary Care Improved Access (PCIA) capacity, UTCs and the NHS 111 CAS (from 1<sup>st</sup> October 2020).

53. The CCG Pre-Consultation Business Case (PCBC) estimates that all users of the WIC, based on the clinical audit in 2018, could have their needs met elsewhere in the health system, with 91% being managed by primary and community care services. This is shown in the table below.

Local services to support people with the following needs	% of patients who used the ESHC WIC for these services
Supported self-care and signposting	21%
Primary care (specifically prescription needs)	65%
Complex and multiple needs	5%
<b>Sub-total for potentially suitable for community-based services</b>	<b>91%</b>
Transferred to Accident and Emergency	3%
Other	8%
<b>Total</b>	<b>100%</b>

54. The CCG has further illustrated that the services currently available at the WIC will be available to all WIC patients in other parts of the urgent care system.

Condition	Available now						Later in the year	
	Walk-In Centre	General Practice	Primary Care Improved Access & Extended Hours	Community Pharmacy	Minor Injuries LCS	NHS 111	Urgent Treatment Centre	NHS111 Clinical Assessment Service
Minor cuts, bruises, burns, strains, insect and animal bites	✓	✓	✓	✓	✓	✓ (advice, onward referrals)	✓	✓  (clinical advice to min. 40% of calls, onward referrals, direct booking in relevant service)  (future developments include implementation of online consultations via NHS111 CAS)
Stitches, wound and dressing care	✓	✓			✓		✓	
Prescribing	✓	✓	✓	✓			✓	
Infections, rashes, hay fever	✓	✓	✓	✓			✓	
Stomach aches, vomiting and/or diarrhoea	✓	✓	✓	✓			✓	
Blood pressure checks	✓	✓	✓	✓			✓	
Emergency contraception	✓	✓	✓				✓	

13

55. The CCG is therefore proposing to:

<sup>13</sup> The Future of Eastbourne Station Health Centre – Informal progress update to the HOSC Review Board. East Sussex CCG, 24 July 2020

- Decommission the existing WIC service at Eastbourne Station Health Centre.
- Disperse the GP list at the Eastbourne Station Health Centre amongst local GP practices.

56. The CCG also plans to:

- commission Care Navigation to support people who may continue to go to the Eastbourne Station Health Centre for a two-month period prior to closure; and
- develop a wide-ranging communications and engagement programme to support the patient population to make the best choices for their healthcare”<sup>14</sup>

57. The Board heard from the CCG it had assessed the impact of the Covid-19 outbreak on local services and concluded that while the way in which people access services at the Eastbourne Station Health Centre has changed (for example via remote consultations) there has been no material change to the original proposal set out in the PCBC.

### Funding

58. The CCG has said the principle driver of the proposal is not to achieve financial savings. Value for money is a consideration, however, as the NHS Constitution requires the CCG to get best value for money for the services it provides. The CCG has indicated an annual saving of £665k if the Eastbourne Station Health Centre were to close. The breakdown is provided in the table below from the PCBC.

**Table 12: Financial impact of the proposal**

<b>Current funding for services at Eastbourne Station Health Centre</b>	<b>Total (£'000s) Full Year</b>
WIC contract	773
Registered list	390
<b>TOTAL</b>	<b>1,163</b>
Proposal – de-commissioning of WIC – revenue released for re-investment	(773)
Removal of the APMS contract for the registered list	(390)
<b>SUB-TOTAL – revenue savings</b>	<b>(1,163)</b>
Dispersal of the registered list on the typical GMS rate	298
Patients redirected to A&E (772)	59
NHS 111 CAS patients redirected to UTC (1,829)	141
<b>SUB-TOTAL – revenue costs</b>	<b>498</b>
<b>NET IMPACT (savings)/cost</b>	<b>(665)</b>

59. The Board heard from the CCG that the net savings from the closure of the WIC could be made available for reinvestment in other services to support the needs of local people. The funding for the GP list, which is about a third of the total funding allocation to the Eastbourne Station Health Centre, will follow patients, meaning the GP practices they register for would receive the additional funding.

### Impact on staff at the WIC

60. The CCG indicates in its PCBC that “there would be opportunities for the current staff to work in other services, including primary care and community care services. As local PCNs

<sup>14</sup> The Future of Eastbourne Station Health Centre Pre-Consultation Business Case (PCBC), EHS CCG, 29 January 2020, p.6

develop and implement their workforce plans there may be additional opportunities for the existing staff, which would help avoid losing key skills and valued experience in the locality".<sup>15</sup>

61. The Board heard from IC24 that it would not be able to offer staff at the Eastbourne Station Health Centre alternative employment in Eastbourne.

62. The Board heard that the Eastbourne Station Health Centre employs locum GPs, rather than partnered or salaried GPs, who already work flexibly and would presumably find locum work in other facilities. As for the remaining staff, the CCG plans to liaise with the current provider at the appropriate time to understand what opportunities there are for potential employment.

63. The Board understands, however, that because a decision has not yet been made about the future of the Eastbourne Station Health Centre it is too early to say for certain what will happen to staff.

#### *Comment*

64. The Board believes that staff shortages are a national issue in the healthcare sector. If a decision is taken to close the Eastbourne Station Health Centre, there should be no overall loss of healthcare staff to the local system and the closure should have a minimal impact on the staff working there.

#### **Recommendation 1**

**If a decision is taken to close the Eastbourne Station Health Centre, the CCG should liaise with the current provider at the appropriate time to understand what opportunities there are for potential employment of the Eastbourne Station Health Centre staff to minimise any loss of available healthcare staff in the local system, and mitigate the impact on staff members themselves.**

---

<sup>15</sup> Ibid., p.39

## Review Board's examination of the proposals

65. The Board has examined the CCG's proposal to close the WIC at the Eastbourne Station Health Centre and disperse the GP patient list by looking at the following areas:

- whether alternative proposals were viable;
- whether the WIC is a duplicate of services available as part of the new integrated urgent care system;
- whether services will be in place to assist homeless and other vulnerable groups if the WIC closes; and
- whether the Eastbourne Station Health Centre GP list can be successfully dispersed into the nearby GP practices.

### *Alternative options considered*

66. The CCG initially proposed to close the walk-in centres in both Eastbourne and Hastings. Following a period of further engagement in 2019 and review of the proposals for both sites, however, the CCG decided against the closure of the Hastings Station Plaza walk-in centre and instead agreed to establish it as a primary care-led hub with an Advanced Nurse Practitioner-led walk-in facility.

67. The CCG's justification for retaining the service included:

- there had been consistent increased in demand for WIC services in Hastings since 2016/17;
- there is a small but significant group of patients in Hastings with multiple and complex needs who struggle to navigate healthcare services and who, therefore, access their healthcare through the WIC;
- Hastings Station Plaza is a dedicated healthcare facility that already accommodates a range of services and which has room for expansion; and
- General practice in Hastings is rated highly by local people but is under a great deal of pressure.<sup>16</sup>

68. The CCG meanwhile decided to continue with the proposal to close the Eastbourne Station Health Centre. The CCG considered several other possibilities for the future of the site prior to consulting solely on its closure but concluded that none were viable for progression to the public consultation stage. These included:

- Retain current WIC provision, i.e., a "do nothing" option
- Reduce WIC operating hours (for example 8:00 to 18:30 or others)
- Expand service provision at the WIC (for instance after 20:00)
- De-commission duplicate services (for example PCIA)
- Develop the WIC into a primary care integrated hub, as in Hastings.

69. The CCG's rationale for not progressing any of these to the consultation stage included:

- The current system is too complicated and many services are duplicated.

---

<sup>16</sup> Urgent Care in East Sussex report to HOSC, EHS CCG, 26 September 2019

- The needs of the small group of vulnerable patients who use the WIC can be supported and resolved by other local services such as the Rough Sleepers Initiative, mental health and substance misuse services.
- The current Eastbourne Station Health Centre premises are not suitable for further expansion and would not support the delivery of integrated care or have space for the PCN multidisciplinary teams.
- Increasing opening hours could lead to further shift in activity from general practice and the PCIA impacting system resilience and moving people away from the full primary care system, meaning they do not benefit from additional and enhanced services that are available in GP Practices but not at Eastbourne Station Health Centre.
- PCIA and NHS 111 CAS are nationally mandated and recently commissioned services<sup>17</sup>.

70. The Board heard evidence from IC24 that whilst it agreed it was important for the CCG to review the services it commissions, the Eastbourne Station Health Centre still provided an important role. This includes:

- IC24 has demonstrated that it is a flexible provider, supporting and working collaboratively with the wider health system, for example, when the Eastbourne District General Hospital (EDGH) declares a black alert, IC24 offers to take more patients at the Eastbourne Walk-in Centre.
- IC24 would be prepared to convert from a WIC to an Advanced Nurse Practitioner (ANP)-led walk-in service that works with the onsite GPs within the practice. This could free up funding.
- The Eastbourne Station Health Centre has capacity to expand as it is not at capacity now, with 16 of a potential 23 staff members currently in place. It has found it difficult to expand and invest in services fully up to this point, as it was on a five-year contract initially and has been on a rolling contract since then.

71. The Board heard from Save the NHS Campaign Group, who had gathered an online petition of 2,272 signatures and a separate paper petition to save the Eastbourne Station Health Centre. The Campaign Group's view was that the WIC should remain open because it is central and is open to anyone, including visitors, who cannot access their own GP when they need to.

72. Healthwatch conducted a survey on patients' experience of Covid-19 between April and June 2020. There were 2,200 responses and no comments about the WIC.

### *Comments*

73. The Board does not object to the decision by the CCG to only consult on the proposed closure of the Eastbourne Station Health Centre rather than offer alternative options. The Board also notes that there is a strong belief from both the current provider and a section of the community that the Eastbourne WIC is still a valuable service that should be retained.

### ***Integrated urgent care system***

74. Urgent care refers to the diagnosis and treatment of minor injuries or illnesses that ideally need to be seen on the same day, such as strains and sprains, ear and throat infections and feverish illnesses.

---

<sup>17</sup>The Future of Eastbourne Station Health Centre Pre-Consultation Business Case (PCBC), EHS CCG, 29 January 2020, appendix 5

75. The new integrated urgent care model (IUC) that is being developed in England includes but is not limited to UTCs, NHS 111 CAS, extended access to GP services, and community pharmacy services.

76. The CCG argues that the new IUC model provides comprehensive access to urgent and same-day primary care services for residents, meaning that the Eastbourne Station Health Centre is now a duplicate service. The 111 CAS is due to begin on 1 October 2020 and the majority of the other services are now available.

77. The CCG produced the modelling to demonstrate that there will be sufficient capacity available in the system should the Eastbourne Station Health Centre close, based on the ambition to use the new NHS 111 CAS service as the main entry point for people who need same-day care. This modelling has been reviewed in response to feedback from the South East Clinical Senate.<sup>18</sup>

Assumptions	Total WIC activity 15,432 per year (as per PCBC)	
	Resulting activity	
	Per day	Per year
• 16% of current activity to self-management	7	2,469
• 5% redirected to A&E	2	772
• 79% to NHS 111 of which:	33	12,191
○ 15% Consult and Complete via NHS 111/CAS	5	1,829
○ 30% redirected to UTC	10	3,657
○ 55% redirected to other primary care services	18	6,705

78. The CCG has indicated that it will commission a fully comprehensive communications and engagement plan for IUC model across the Sussex Health and Care Partnership. It is claimed this will ensure consistent messaging for patients and the public across Sussex. In addition, engagement activities will be conducted at a local level and communications will be tailored to local communities.<sup>19</sup>

79. The Review Board has spoken at length with the CCG and with other witnesses about the capacity of these services locally to provide support for patients currently using the WIC.

<sup>18</sup> CCG response to the South East Clinical Senate recommendations, 24 July 2020

<sup>19</sup> Urgent Care in East Sussex report to HOSC, EHS CCG, 26 September 2019

## Eastbourne Urgent Treatment Centre (UTC)

80. NHS England required all CCGs to develop UTCs within their local area. It described UTCs as “community and primary care facilities providing access to urgent care for a local population.”

81. NHS England set out 27 minimum standards for a UTC including:

- should be open for at least 12 hours a day seven days a week, including bank holidays.
- should provide both pre-booked same day and “walk-in” appointments.
- Pre-booked appointments should be seen within 30 minutes of the agreed time.
- must include minor illness and injury, including wound closure, removal of superficial foreign bodies and the management of minor head and eye injuries. Diagnostics and plain x-ray facilities are desirable.
- Should be able to issue prescriptions, including repeat prescriptions and e-prescriptions
- Should have arrangements in place for staff to access an up-to-date electronic patient care record.
- There must be the ability for other services (such as NHS 111) to electronically book appointments at the UTC directly.<sup>20</sup>

82. NHS England did not prescribe where UTCs should be located but required CCGs to review current provision of their existing urgent care facilities against these standards and make a plan for each existing facility<sup>21</sup>.

83. The Sussex Health and Care Partnership (SHCP) agreed a strategic approach to establishing UTCs in Sussex which included co-locating them either with existing A&E departments, or at existing community hospitals.<sup>22</sup>

84. The CCGs in East Sussex agreed that the location of UTCs for the Eastbourne and Hastings area should be at the hospital sites. The Board was informed this was to reduce the pressure on A&E departments by providing urgent care to people who arrive in A&E but can be seen and treated by a GP or Advance Nurse Practitioner (ANP), and to ensure that the additional services UTCs must provide, such as diagnostics, can be safely and sustainably staffed.

85. UTCs were opened at the Eastbourne District General Hospital (EDGH) and Conquest Hospital on 1 December 2019, replacing the existing GP-led Primary Care Streaming Services via a contract variation. The Minor Injuries Unit at the Victoria Hospital in Lewes was upgraded to a UTC following refurbishment in April 2020.

86. The specifications of the UTC at the EDGH includes:

- Open 365 days per year from 10am to 10pm
- Co-located within the A&E, with walk-in patients being triaged to either the Emergency Department or the UTC if appropriate for their care.
- UTC staff have access to key patient information, such as the Summary Care Record, other local care records, care/crisis plans, and key patient flags

---

<sup>20</sup> Urgent Treatment Centres – Principles and Standards, NHS England, July 2017. p.7-10

<sup>21</sup> Ibid. P.6

<sup>22</sup> Urgent Care in East Sussex report to HOSC, EHS CCG, 26 September 2019

- The service offers electronic prescriptions via the NHS Electronic Prescription Service<sup>23</sup>
- Is a GP led service with an Emergency Nurse Practitioner (ENP). Two ENP are on site 7:30am-10:00pm, one GP is on site 10:00am-10:00pm Monday-Thursday and two GPs Friday-Sunday.
- The A&E as a whole (including main emergency department and UTC) is currently seeing 80-90% of walk in patients within 4 hours.

87. The CCG modelling indicates that the closure of the Eastbourne Station Health Centre will result in an additional 10 patients per day being redirected to the UTC. This is because relatively few of the patient contacts at the WIC are for urgent care needs. The modelling also shows that they would be booked into an appointment by the NHS 111 service, rather than walk-in, although patients can still walk-in to A&E and be triaged to the UTC.

88. The CCG also claimed that there was no clear correlation with growth in A&E activity or other services during the two-month closure in September 2018 of the Eastbourne Station Health Centre due to flooding.<sup>24</sup>

89. The Board heard from East Sussex Healthcare NHS Trust (ESHT), the provider of the UTC, that having reviewed the evidence of the PCBC it supported the CCG's proposals. The Trust does not anticipate much additional work coming through to A&E and the UTC due to the very small number of patients using the WIC who require urgent or emergency care.

90. The Trust said that the A&E and UTC currently see 200-250 patients per day, so an increase of 10 would be around 4-5% of activity. The Trust is also looking to recruit to the UTC a further 2-3 GPs and 5-7 nurses. Realistically these will be locum GPs.

91. The location of the UTC is according to Google Maps, 33 minutes' walk from the Eastbourne Station Health Centre (1.7 miles) and is accessible from the town centre via the LOOP, 1A, 51, 54, 56, and 98 buses. Bus tickets cost £2.90. A taxi is approximately £8-10 return from the town centre.

92. The Board heard from Healthwatch that some buses to the EDGH have poor access for prams or wheelchairs, although the hospital site would be more convenient for some patients. Save the NHS Campaign Group and three written statements to the Board also raised concerns about the distance of the UTC from the town centre and the difficulty in reaching it for walk-in patients who rely on public transport.

### *Comments*

93. The Board observes that ESHT is supportive of the CCG proposals and is confident it can provide for the additional capacity to its UTC if the Eastbourne Station Health Centre closes.

94. The Board also notes that the UTC can provide more services to patients than the WIC, such as diagnostics and x-rays, and for a longer period during the day. The UTC staff can potentially more easily triage patients to the A&E, for the very small number of patients who that would apply to.

95. The Review Board agrees that additional travel times may be necessary for some people, although the majority of buses from the town centre travel past the EDGH on their route to other parts of the town. The Board notes that the number of patients who may have to travel to the UTC is around 10 per day, although some of these may live closer to the hospital than the

---

<sup>23</sup> *ibid*

<sup>24</sup> Urgent Treatment Centres and walk-in centres developments – Informal progress update to the HOSC Review Board, EHS CCG, 26 July 2019

town centre. Furthermore, they should have the ability to book themselves into the UTC via NHS 111 at a specific slot and be seen within 30 minutes of that time.

## NHS 111

96. NHS 111 is a non-emergency medical helpline operating 24 hours a day, seven days a week. NHS 111 was launched in April 2013 and is provided across England by a variety of different organisations. 111 is staffed by fully trained, non-clinical Health Advisors. South East Coast Ambulance NHS Foundation Trust (SECamb) provides the 111 service across the Kent, Medway and Sussex area.

97. Following concern that up to 80% of all calls to NHS 111 resulted in signposting to a different NHS service,<sup>25</sup> NHS England published a new service specification for NHS 111 that required CCGs to recommission 111 to include a Clinical Assessment Service (CAS) that moves the service from an 'assess and refer' model to one of 'consult and complete' and is able to offer the following to patients:

- consultation with a clinician over the telephone;
- direct booking into a face-to-face service where necessary (for example, GP practice or UTC);
- electronic prescriptions;
- access to the patient's record; and
- self-help information delivered to the patient.<sup>26</sup>

98. NHS England said this would mean in future "as many clinically appropriate calls to NHS 111 as possible should be closed following consultation with an appropriate clinician, negating the need for onward secondary care referral or additional signposting".<sup>27</sup>

99. The contract for the new 111 CAS service was awarded to SECamb across the Kent, Medway and Sussex area. The contract was due to go live on 1<sup>st</sup> April 2020 but was postponed by six months due to the need to prioritise a response to the Covid-19 pandemic. The CCG and SECamb both assured the Board that they are confident that the 111-CAS will now go live on 1<sup>st</sup> October 2020.

100. A new Out of Hours Home Visiting service also went live on 1<sup>st</sup> April 2020. This service is delivered by IC24 and is a GP led multi-disciplinary team comprising of GPs, Paramedic Practitioners, ANPs and Prescribers. The Home visiting service runs from 6:30pm to 8:00am on weekdays and all day at weekends and bank holidays. Patients who call 111 and speak with the CAS may be provided with a home visit from the Home Visiting Service if there is a clinical need.

101. The Board also understands that the unprecedented demand on 111 during the Covid-19 pandemic means that the NHS 111 CAS service will need to be expanded further to accommodate the expected demand from a new Think NHS 111 First initiative that is in the process of being rolled out.

102. The Board was informed by the CCG and SECamb that people who call the NHS 111 CAS will be able to receive 24/7 access to clinical advice and treatment over the phone from a healthcare professional if needed. Patients needing to see someone face to face will be given an appointment into the right service, at a time and place that is best suited to their clinical need

---

<sup>25</sup> Integrated Urgent Care Service Specification, NHS England, August 2017, p12.

<sup>26</sup> Ibid. p.14

<sup>27</sup> Ibid. p13.

and based on where they are, which may include a same day appointment if appropriate. The Board heard how this will be achieved:

- 111 staff are co-located with 999 staff at the SECamb control centre in Crawley, which enables the 111 service to benefit from the additional clinical input of 999 teams.
- The CAS will include paramedics, ANPs, specialist nurses (including mental health clinicians), pharmacists and some GPs within its workforce.
- The service specification for the CAS will require that 40% of calls made to 111 receive clinical advice the first time they call, with this percentage increasing over time.
- 111-CAS clinicians will be able to access a patient's care record via GP Connect.
- 111 will be able to arrange urgent prescriptions over the phone and send these directly to pharmacies.
- 111 will be able to book patients into appointments at GP practices, the UTC or in PCIA clinics.
- The OOH Home Visiting service Key Performance Indicators (KPIs) include that 95% of patients receive a face-to-face consultation within their home residence within the specified period: 1hr (emergency), 2hrs (urgent), and 6hrs (non-urgent).
- 111 Health Advisors may send an ambulance to a patient if the NHS Pathways triage system indicates one should.

103. The Board questioned whether replacing initial face to face assessments with over the phone contact is a risk if patients cannot describe their symptoms accurately. SECamb said it cannot guarantee the new 111-CAS will get diagnosis right 100% of the time and acknowledged that there is a possibility a face to face appointment may identify more serious underlying issues better than over the phone. However, the Board also heard that the 111 service is risk averse and that a conveyance rate of patients to hospital by ambulance of approximately 50% following a telephone consultation is evidence of its cautious approach. The new service will enable Health Advisors to invite in staff from the CAS onto the call to assist with a diagnosis. Patients who are advised to self-care will also be advised to call back to 111 if they feel worse, in the same way that patients who see a doctor and are advised to self-care at home and call back if they need to.

104. The CCG claims that, based on modelling, 79% of patients currently using the Eastbourne Walk-in Centre will be triaged via 111 to other services. This amounts to 33 patients per day, including five who will speak with a health professional in the CAS.

105. The Board heard from SECamb that it has analysed the CCG's estimated activity levels and said it is difficult to say for certain whether the modelling is accurate and whether usage of the 111 will be as high as predicted. This is because it is not clear whether as many of the young, active users of the WIC will choose to access healthcare via 111 rather than self-care. Nevertheless, SECamb believes it has the capacity in to meet the estimated demand of around 80% of the WIC's current activity as set out in the PCBC.

106. The Board is aware of concerns that NHS 111 has had a relatively poor public perception over the years. Save the NHS Campaign Group members told the Board that 95% of the people they had spoken to on the high street had said they were very dissatisfied with the 111 service and most said they are aware of it but would rather not use the 111 service.

107. The CCG is confident, however, that the Covid-19 pandemic has improved people's views of NHS 111, given its central role as a contact point for patients trying to access the NHS. SECamb believes that the planned Think 111 First national campaign is likely to build public confidence further that there is a new and enhanced 111 service available. Knowing they will be able to speak with a clinician should give a patient the added confidence to contact 111.

108. The Board heard that the SHCP's winter plan will include advertising the availability of the new 111-CAS as a key component. The CCG is working to reach those who don't access normal media to make them aware of it and has said local GP practices will be promoting the 111 service. ESHT is also planning to pilot the Talk Before Walk initiative from 1 October to encourage people to contact 111 before coming to A&E.

### *Comments*

109. The Board heard that the new NHS 111 CAS is on target go live from 1 October 2020 and will have sufficient capacity to absorb the additional patients from the Eastbourne WIC should a decision be made to close that facility. The fact that 79% of all capacity of the Eastbourne WIC is expected to go via NHS 111 in future and the centrality of the service to the SHCP's winter plan, however, means that 111 is clearly central to the new IUC model. This means that any delay in the new service being available from 1 October would bring into question the viability of closing the WIC in the short term.

110. The Review Board is satisfied that the new 111-CAS has the ability to book patients into same-day UTC or GP appointments and issue prescriptions electronically, which is an alternative way of accessing healthcare for many patients currently using the Eastbourne WIC. This could potentially be a convenient way for patients to access care in the future.

111. The Board agrees, however, that 111 may have an image problem due its previous, more limited role as a signposting service. Some people, therefore, could still be reluctant to use it as a first point of contact for urgent care, either because they are not aware of its expanded role, or they have had a previous bad experience. Extensive communications locally, as well as nationally, are clearly vital, therefore, to raise awareness of the services it can provide from 1 October 2020.

### **Extended access to GP services**

112. In the General Practice Forward View (2016), NHS England placed the requirement on CCGs to commission evening and weekend GP appointments for residents because "public satisfaction with general practice remains high, but increasingly, we are seeing patients reporting more difficulty in accessing services".<sup>28</sup>

113. In return for additional funding, CCGs were required to commission a service by 1 October 2018 that provided access to additional pre-bookable and same day appointments to GP services on weekday evenings (after 6.30pm) and on both Saturdays and Sundays, amounting to up to 45 minutes consultation capacity per 1000 population.<sup>29</sup>

114. CCGs were permitted to commission this extended access from Primary Care Improved Access (PCIA) hubs rather than at each individual GP practice.

115. The contract specification for the new PCN Directed Enhanced Services (DES) contract, published in 2019, included a requirement for PCNs to establish Extended Hours Access separately to the PCIA service, from 1 July 2019. This new service includes the requirement of additional clinical sessions, outside of PCN member practices core hours, to all registered patients within the PCN equating to a minimum of 30 minutes per 1,000 registered patients per week.<sup>30</sup>

---

<sup>28</sup> General Practice Forward View, NHS England, April 2016, p. 47

<sup>29</sup> NHS Operational Planning and Contracting Guidance 2017-2019, NHS England and NHS Improvement, September 2016

<sup>30</sup> Network Contract Directed Enhanced Service, NHS England and NHS Improvement, March 2020, p.24

116. The PCIA service and the extended hours element of the DES are due to merge to a single contract by April 2021 with combined ringfenced funding.<sup>31</sup>

117. There are two PCIA hubs in Eastbourne: Park Practice (located 2.6 miles from the Eastbourne Station Health Centre and Harbour Medical Practice (3.3 miles from the Eastbourne Station Health Centre) which provide 100% coverage for Eastbourne.<sup>32</sup> The GP Federation, South Downs Health and Care, provides the hubs.

118. The PCIA hubs are open Monday- Friday 6:30-8:30pm; Saturday 8:00am-12noon; Sunday 9:00am-1:00pm and Bank Holidays 9:00am-1:00pm. Patients can access them via their own GP or via 111.

119. In response to Covid-19 a primary care 'Hot Site' was established at Hampden Park which will remain open until March 2021. The site consolidated the usual PCIA capacity and also offers dedicated service to assess and treat patients with Covid-19 symptoms that may present in general practice. The intention is to return to normal provision at the Park Practice and Harbour Medical Practice from next year when the Hot Site is scheduled to finish operating in March 2021.

120. From the Eastbourne Station Health Centre, the Park Practice PCIA hub can be accessed via the 51, 1A, 55, and 55A bus routes. The CCG estimates the journey time is between 23 and 38 minutes, depending on the route. The approximate cost of a single bus ticket is £2.90. Park Practice can also be accessed by car, with an approximate journey time of 15 minutes. Free parking is available at Park Practice.

121. The Harbour Medical Practice PCIA hub is served by the Loop, The Wave 99, and the 5 with the CCG estimating journey times of between 22 and 38 minutes. The approximate cost of a single bus ticket is £2.90. Harbour Medical Practice can also be accessed by car, with an approximate journey time of 20 minutes. Free parking is available at Harbour Medical Practice. The CCG estimates the approximate cost of a taxi one-way to both destinations is £6.

122. According to the CCG, the PCIA hubs offer:

- Approximately 630 face to face appointments per month in Eastbourne.
- An average of 1,151 telephone consultations as additional primary care appointments each month (equivalent to over 13,800 over a year) across Eastbourne, Hailsham and Seaford.
- A video consultation services commencing 1st September 2019 that is currently offering 800 appointments per month. It is available Monday to Friday between 16:00 and 20:00, and at weekends and bank holidays between 08:00 and 16:00. The majority of the monthly 1,151 telephone consultations will gradually be replaced with video consultations.

123. Extended Hours DES appointments are in addition to the PCIA capacity and provide patients in Eastbourne with access to a further 69 hours of general practice appointments. The PCN Extended Hours DES appointments are offered at a practice to its own patients only. These appointments are usually available between 7:00am-8:00am in the morning, 6:30pm-8:00pm on weekdays, and 8:00am-1:00pm on Saturdays.

124. The Board saw evidence from the CCG that there is spare capacity in PCIA face-to-face appointments. Based on the latest available data for November 2019:

---

<sup>31</sup> Ibid., p38

<sup>32</sup> Urgent Care in East Sussex report to HOSC, EHS CCG, 26 September 2019

- Across the two Eastbourne hubs, the take-up of appointments at the point of booking was 91%, and the actual take-up (as some people did not attend) was 80%.
- The take-up of weekday evening appointment slots at the point of booking was 87% and the actual take-up was 79%.
- The take-up of weekend appointment slots at the point of booking was 97% and the actual take-up was 82%.

125. The Board heard from the Victoria PCN that it had run weekend extended access appointments but patients had not attended in sufficient numbers to justify continuing to run them. The PCN then engaged with the GP practices' Patient Participation Groups (PPG) to find out which days and times patients would prefer. In response, the PCN is now offering additional appointment from 7:00am-8:00am on a Tuesday morning and Tuesday late evenings on alternating weeks.

126. The Board heard that each GP Practice in the ALPS Group PCN provides their own share of the contracted hours at their own premises to their own patients. These appointments are generally fairly well utilised, however, the number of patients using the Eastbourne Station Health Centre when dispersed across practices in Eastbourne was not of concern.

127. The Board saw other anecdotal evidence that people either still struggle to access extended access appointments, or are unaware they are available:

- Save the NHS Campaign Group told the Board that residents were aware of the extended access services but had not been able to get appointments when needed.
- The CCG's Medical Director informed the Board the number one complaint he receives as a GP is that the GP practice is not open on Saturday, even though it has been for some time.
- The CCG's PCBC includes comments from public engagement relating to the extended access requesting more information about the service should be made available and include clear instructions about how patients access the service and its benefits.

### **Comments**

128. The Board notes that there are PCIA hubs in Eastbourne and extended hours appointments provided by PCNs. According to figures from the CCG, appointments for the PCIA are underused and people did not attend weekend extended access appointments when they were available at the Victoria PCN, despite claims from some that appointments are not available. This suggests there may be a lack of understanding about the option to use PCIA or extended hours appointment locally. The Board thinks that any communications and engagement planned for later in the year must include details about how to access the PCIA hubs or extended hours appointments provided in individual GP practices through the PCNs.

129. The example provided by the Victoria PCN shows it would be beneficial for the CCG to encourage PCNs to consult with their PPG, if they have not done so already, to find out what extended hours services patients would find most helpful if current utilisation is low.

### **Community Pharmacy services**

130. The NHS Long Term Plan envisaged an enhanced role for the community pharmacies, including for managing self-care, and the ability for NHS 111 to book patients into pharmacy consultations.

131. Self-care is recommended when you have a minor condition which doesn't normally need medical care (from a doctor or nurse) or any treatment in order to get better, such as coughs and colds, sprains and strains, and sore throats. Pharmacists are trained to provide advice on self-care or sell over the counter medicine to relieve symptoms.

132. NHS England launched The NHS Community Pharmacist Consultation Service (CPCS) in October 2019. The CPCS offers patients the option of having a face-to-face consultation with a pharmacist following an initial assessment by an NHS 111 call handler. The Pharmacist can provide the patient with advice and treatment for a range of minor illnesses or for an urgent supply of a previously prescribed medicine. Should the patient need to be escalated or referred to an alternative service, the pharmacist can arrange this.<sup>33</sup>

133. Around 21% of patients using the WIC do so for reasons that are categorised as self-care. The CCG estimates 16% of WIC users will be able to self-care instead of attending the WIC in the future, this amounts to 7 patients per day. SECamb confirmed prescriptions ordered over 111 will be sent directly to a pharmacy

134. Across Eastbourne there are 23 community pharmacies, including pharmacies within supermarkets. There several in the town centre including Furness Road, Grove Road, Arlington Road and the Arndale Centre (within a short distance from Eastbourne Station). The pharmacies are open Monday to Saturday 9am to 6pm as a minimum, with additional coverage on Sundays and bank holidays. Some pharmacies in Eastbourne have signed up to the CPCS service.

### *Comments*

135. The Review Board understands that the pharmacies can potentially play a useful role in repeat prescriptions and self-care of patients. The NHS CPCS is new, however, and should be advertised extensively along with other elements of the new integrated urgent care service.

### **Recommendation 2:**

**The Review Board recommends that, if the decision is taken to close the Eastbourne Station Health Centre, the communications and engagement plan for Integrated Urgent Care (IUC) must help improve residents' understanding of how they can access urgent care in their local communities.**

**Communications should focus on the benefits of the new service to patients and should therefore emphasise the wider variety of booked appointments and the potential additional convenience of telephone and video consultations, for example:**

- **The enhanced NHS 111-Clinical Assessment Service (CAS) that includes if appropriate the ability to speak to a clinician via NHS 111 for initial medical advice and book a same day face-to-face appointment at either the UTC, their local GP, a Primary Care Improved Access Hub (PCIA) or a community pharmacy.**
- **If people cannot attend a GP appointment during core hours, they have the option of attending early morning, evening and weekend appointments at a (PCIA) hub, or potentially their own GP practice both face-to-face or over a video or phone consultation (subject to current restrictions in place due to Covid-19 that are planned to be lifted in March 2021).**
- **Patients can order urgent prescriptions over the phone via 111 and have them delivered to a community pharmacy**
- **Patients with self-care illnesses can now book to see a pharmacist via 111.**

---

<sup>33</sup> Advanced Service Specification – NHS Community Pharmacist Consultation Service, NHS England and NHS Improvement, October 2019

**Publicity about the above options for patients should begin well in advance of any closure of the Eastbourne Station Health Centre to ensure people are aware of the new services available to them.**

**The CCG should also encourage GP practices to inform their patients about these changes, for example, by placing advertisements in waiting rooms or on their websites and advising patients when they call their GP practice about accessing 111, for example for an urgent prescription, if it is clinically appropriate to do so.**

**Recommendation 3:**

**The Review Board recommends that the East Sussex Clinical Commissioning Group (CCG) should engage with Primary Care Networks (PCNs) to encourage them to consult with their Patient Participation Group, if they have not done so already, to find out what extended hours services patients would find most helpful, if current utilisation is low.**

### ***Impact of the closure of the walk-in centre on vulnerable groups***

136. The Board was keen to understand the impact of the proposal to close the walk-in element of the Eastbourne Station Health Centre on vulnerable groups who might use it but may find it difficult to access healthcare via other means.

137. The CCG's Equalities Health Impact Assessment (EHIA) identifies a potential negative impact from the closure of the Eastbourne Station Health Centre on homeless and rough sleepers, as the WIC may be a preferred resource for rough sleepers and those in temporary accommodation.

138. The Board heard from the Rough Sleepers Initiative (RSI) that this cohort includes individuals with multiple complex needs such as those who may have suffered abuse and have Post Traumatic Stress Disorder (PTSD); have problems maintaining housing; and may have spent time in prison. Some in this cohort have learning disabilities; 65% have mental health issues, and more than 90% have substance misuse issues. Their mortality rate is also high, and their life expectancy is often in their 40s. The cohort also tend to mistrust healthcare professionals and are unlikely to fill out forms, or attend arranged appointments. They tend to leave chronic and acute conditions until emergency support is required meaning frequent A&E use is recorded. It is also unlikely that rough sleepers and homeless individuals with complex needs will attend a service at the hospital such as the UTC due to the location and travel required to get there.

139. The Board explored the extent to which homeless and rough sleepers currently use the WIC:

- The CCG's clinical audit in September 2018 saw no homeless or rough sleepers attend the service during the three days.
- The Rough Sleepers Initiative currently records GP appointments but not attendance at a walk-in service.
- The CCG lists 18 homeless patients on the GP list at the Eastbourne Station Health Centre and identifies that roughly a third of WIC users are already registered with a town centre GP practice.
- Healthwatch spoke with 25 rough sleepers overnight, with the assistance of homeless charities, and heard the WIC described as a "life-saving service".

140. The Board did gain a clearer understanding of the use of the Eastbourne Station Health Centre as a GP practice for the homeless and rough sleepers, and this is discussed in the next section.

141. The CCG identifies in its EHIA that it is mitigating the impact of the closure on the homeless population by engaging with the Rough Sleepers Initiative (RSI) to understand the impact on homeless and those in temporary accommodation. The CCG has explained how it will help homeless and rough sleepers get in contact with the RSI if the WIC closes. This would include:

- The Care Navigators being in place before closure to help people access the voluntary services and the RSI; and to help put them in touch with the teams who could offer further assistance.
- Working closely with the RSI and other voluntary and community services to ensure that information about the RSI and how to access it was distributed to all the places where homeless service users might go to e.g. GP practices, community pharmacies, NHS 111, the hospital, Eastbourne Borough Council and local community services.

142. The RSI is commissioned in East Sussex by the five district and borough councils and is funded by the Ministry of Housing Communities and Local Government (MHCLG) until March 2021.

143. The RSI works with entrenched rough sleepers with multiple complex needs. It is designed to improve rough sleepers' ability to gain access to services including statutory support services, temporary accommodation, and long-term housing solutions. The Rough Sleepers Initiative currently has 39 open cases in Eastbourne.

144. The RSI is a multidisciplinary team covering the county comprising of two psychiatric nurses, two band 7 nurses, two mental health community support officers, a social worker, a housing specialist and a substance misuse specialist. It is also in the process of recruiting a clinical psychologist.

145. The RSI is a holistic service, but its nurses provide medical assistance to rough sleepers in the following ways:

- Attend the RSI Outreach and Street Engagement sessions which allows members of the team to provide specialist targeted support to rough sleepers.
- Attend drop-in sessions run by Matthew 25 on Monday morning, or the Salvation Army on Monday-Friday from 10:00am-4:00pm and Friday afternoon.
- Help rough sleepers register with a local GP and encourage appropriate appointments with the GP; as well as prevent missed appointments by cancelling, rescheduling or accompanying a patient to an appointment.

146. In addition to the RSI, the Salvation Army also currently has a small room they use once month for a voluntary GP drop-in service, although it is not fully equipped.

147. The CCG commissioned a Care & Protect service from June 2020 provided by the South Down Health and Care GP federation to accommodate and support rough sleepers across East Sussex during the Covid-19 pandemic. This includes medical support such as:

- Supporting rough sleepers with registration at GP practices to ensure they have access to a GP and range of services offered by GP practices
- Connecting accommodated residents with their registered practice.
- Triage and assessment, remote support and care continuity at accommodation sites where rough sleepers have been offered accommodation; and

- Supporting homeless discharges from the hospital.

148. The RSI recommended to the Board that if the WIC closed then there should be a replacement medical drop-in clinic in the town centre.

149. The Board heard that the CCG has a desire before publishing its DMBC to understand what services need to be put in place to enable easy access to services for the homeless community. Access in the community has been acknowledged as the best way to support these patients in a holistic manner and is being explored by the CCG. The Board understands this includes the potential for medical drop-ins to be embedded within existing community provision in the town centre area.

150. The CCG's DMBC will include a proposal for how to support this population and the timescales for when additional support would be in place.

### *Other vulnerable groups*

151. The Board heard Healthwatch explain that the vast majority of people in temporary accommodation or sofa surfing are not regular users of GP services and will use the WIC if they use anything at all. This is because they often have chaotic lifestyle and problems with accessing appointments. If they can't get to the WIC, patients in this group will just go to A&E. This cohort would not be eligible for support from the RSI as they are not verified as homeless.

152. IC24 claimed it has built up expertise on how to look after these people and considers looking after them its speciality. This includes 64 patients on the GP list who are either homeless or sofa surfing, which masks the true figure as many do not like to say they are in that position. IC24 is concerned these people will disengage with primary care and end up using A&E.

153. The Board noted that the EHIA identifies a potential negative outcome for lower income households, as there are a number of areas of deprivation around the Eastbourne Station Health Centre and 31% of usage of the WIC is from local residents.

154. The Board also heard from Healthwatch how the WIC's close proximity to shops, restaurants, libraries and other local amenities means it benefits those who are busy and on low incomes, such as single mothers, because they may attend the town centre to complete multiple errands including visiting the WIC.

155. The Board also heard from the Save the NHS Campaign that local language schools rely on WIC to ensure safety of foreign students who come to learn English. The schools advise students attending that if they feel ill, they should go to the WIC.

156. The CCG clarified that international students can register with a local practice as a temporary resident. NHS 111 also already offers translation services, via a national language line, for those people whose English is not the first language and who find it difficult to communicate in English. NHS 111 also offers webcam and video facility for people who use British Sign Language.

157. The CCG identifies the enhanced 111 service and PCIA services as services that will help mitigate any impact on lower income households by providing accessible alternatives to the WIC, i.e., the ability to contact 111 over the phone to order a repeat prescription, speak to a healthcare professional, or book a GP or UTC appointment, rather than physically attend the WIC.

158. The EHIA also identifies the closure as having a negative impact on community cohesion, as those who live nearby are the most common users.<sup>34</sup> The action taken to mitigate includes targeting these residents during the consultation to advise them of alternatives. This includes employing Care Navigators in the two months prior to the closure to assist people attending the Eastbourne Station Health Centre.

159. The Board also saw evidence of other services available for people with complex and multiple needs, including:

- High Intensity Users Service;
- Drop-in mental health services for adults;
- iROCK youth mental health drop-in service;
- Community Connectors, a free service for adults experiencing social issues;
- Drug and alcohol recovery services;

160. Social prescribing is also available to residents in Eastbourne. Social prescribing involves referring people to a range of local, non-clinical services, typically provided by voluntary and community sector (VCS) organisations, that can help improve their health and emotional wellbeing. Social prescribing has been provided in East Sussex in recent years by several VCS organisations including Southdown, Care for the Carers, Age UK East Sussex and SCDA. PCNs are now required as part of their nationally mandated contract to provide social prescribing for their patients and receive funding to employ a social prescribing Link Worker.

161. NHS guidance for the employment of Link Workers states that PCNs should work in partnership with existing social prescribing schemes to avoid duplication and maximise outcomes for patients. A new integrated East Sussex Social Prescribing Referral Pathway is being developed to help people access social prescribing in a consistent way.

162. The CCG said the Eastbourne Station Health Centre has a small registered list and operates within a small premises that is difficult to expand. This means it does not benefit from the wider range of primary care professionals and primary care services of other GP practices.

### *Comments*

163. The witnesses the Board spoke with made it clear that rough sleepers are unlikely to access walk-in appointments outside of the town centre and are likely to leave any medical complaint until it becomes an emergency. The CCG is looking at what service provision should remain for this cohort in the town centre if the WIC is to close and will set out its plans in its DMBC.

### **Recommendation 4**

**The Board recommends that the CCG investigates the feasibility of commissioning a drop-in clinical service for homeless and rough sleepers in the town centre ahead of the publication of its Decision Making Business Case.**

164. The Board believes that the RSI is an important service for the homeless community and those in temporary accommodation. It is important that Care Navigators present at the Eastbourne Station Health Centre ensure that any homeless user is made aware of the service.

---

<sup>34</sup> Extended Equality and Health Inequalities Impact Assessment (EHIA), East Sussex CCG, 2020, p.119-130

165. There are also other vulnerable groups using the WIC, such as young carers, those in temporary accommodation, and those who have English as a second language. Care Navigators need to ensure they are made aware of the new IUC model.

166. Vulnerable patients may have additional needs to healthcare and social prescribing may help them to access community-based support to maintain their health and wellbeing. Care Navigators should make use of the East Sussex Social Prescribing Pathway to refer patients to community based preventative services.

### **Recommendation 5**

**The Board recommends that the CCG ensures that if the decision is taken to close the Eastbourne Station Health Centre, the Care Navigators employed to assist people target any homeless and rough sleepers and advise them of the Rough Sleepers Initiative and any other available services.**

**Care Navigators should also ensure they focus on other vulnerable groups such as people living in temporary accommodation, young carers, or those with English as a second language to ensure they understand the new Integrated Urgent Care system and are confident they can access it. They should also be in a position to use social prescribing to ensure vulnerable groups are supported to access non clinical support from community based services .**

### **Recommendation 6**

**The Board recommends that if the decision is taken to close the Eastbourne Station Health Centre, the CCG should contact language schools and ensure that they are aware they should advise their students to use 111 as the first point of contact if they feel ill.**

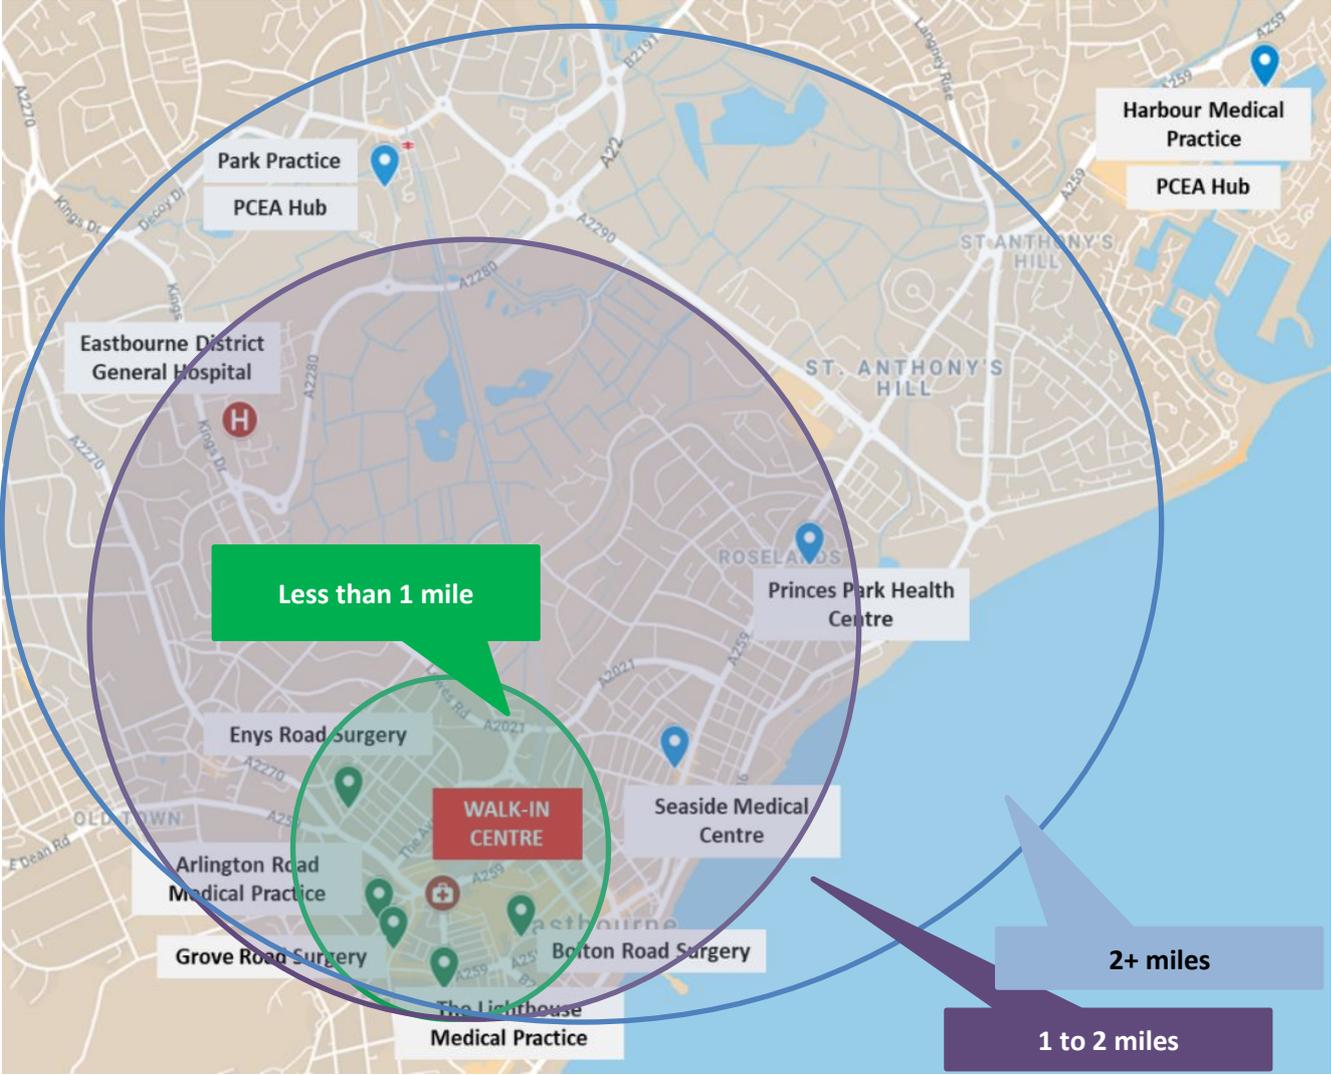

### ***Capacity of the GP practices to absorb patient list***

167. The proposed closure of the Eastbourne Station Health Centre also includes the need to disperse the patient list of the small GP practice present on site. The Board has looked at how this will affect patients.

168. The Board has seen a number of concerns raised in the local media about the capacity of the Eastbourne Central PCN practices to absorb the GP list now and in the future with the expected growth in housing in the town centre.

169. Eastbourne Station Health Centre has a patient list that is currently 3,196 and the majority live in the area surrounding the practice. The practice is part of the Eastbourne Central PCN (or Victoria PCN) along with Green Street, Enys Road and Bolton Road practices.

170. According to the East Sussex Joint Strategic Needs and Assets Assessment (JSNAA), about 90% of households in Eastbourne can access a GP practice within 15 minutes by public transport or walking. The Five GP practices within 0.5-mile distance from the Eastbourne Station Health Centre are marked in green on the map below.

171. Green Street, Enys Road and Bolton Road applied to the CCG to formally merge into a single GP practice called Victoria Medical Centre. There is a large purpose built medical facility under construction in the Old Town area of Eastbourne that is due to open in April 2021 (Old Town is at the bottom left of the map above). The new practice will have 50 car parking spaces on site, easy access to the ground floor, large clinical rooms and operating suites. The PCN will be able to provide wound care in the new hub via the 9 nurses rooms on ground floor and two operating suites.

172. The Registered list population of Eastbourne Station Health Centre includes residents throughout Eastbourne, although the majority are in the town centre. If a decision was made to close the Eastbourne Station Health Centre, the CCG will allocate patients to other local practices, which could include the newly established Victoria Medical Centre, with support provided to people to register in a practice of their choice.

173. Once the Victoria Medical Centre is completed, it will be able to accommodate up to 30,000 patients. The GP practices planning to relocate into the new site have a combined patient list of 24,000 and will be able to accommodate additional patients if required. The Clinical Director of the Victoria PCN confirmed it would not be a problem to absorb the patient list at the Eastbourne Station Health Centre.

174. The closure of the Eastbourne Station Health Centre and creation of the Victoria Medical Centre will leave Grove Road Surgery, Arlington Road Medical Practice and The Lighthouse Medical Practice available in the town centre. The Clinical Director of the ALPS Group PCN, which covers the other town centre practices, confirmed these practices could take some additional spaces, however, a large number of patients would put a lot of pressure on them.

175. The CCG confirmed the only practice with a closed list is Bolton Road, which will reopen when it formally merges with Enys Road and Green Street in October 2020. Some practices may have a capped list but if a practice has a capped list, the CCG can still allocate patients to the practice via their Allocations team.

176. The Victoria PCN recognises that some patients who use its town centre practices may have mobility issues and find it difficult to attend the Old Town Practice. The PCN is in discussion with the CCG Estates Team to find a location in the town centre for a potential branch surgery. The Board understands this is a work in progress and still being explored.

177. The Board understands that the funding for GP practice follows the patient, so the GP practices taking on the dispersed list would receive the additional funding for each patient. The CCG has indicated the rate is usually between £80 and £90 per patient per annum for a GMS and estimates a total of £298k of annual funding will follow the patients<sup>35</sup>.

### *Capacity of GPs*

178. The ability to staff primary care services to meet the needs of patients has been a concern in recent years, particularly whether there are sufficient GPs. The Board understands that the current GP to patient ratio in Eastbourne is above the national average. Increasingly, however, GP practices deliver direct patient services through employing other healthcare professionals such as ANPs. The new PCN contract also provides full funding for additional Direct Patient Care staff like physiotherapists, paramedics and pharmacists, as well as social prescribers.

179. The CCG say GPs see value in these new workers like ANPs taking on an element of their workload and freeing them up to look after more complex patients. It also allows for potentially more rapid 15-minute appointments for more straightforward cases undertaken by an ANP or pharmacist, creating extra capacity. The employment of physiotherapists has also proven highly advantageous for patients with MSK issues and who no longer need to wait 10 weeks for a hospital outpatient appointment.

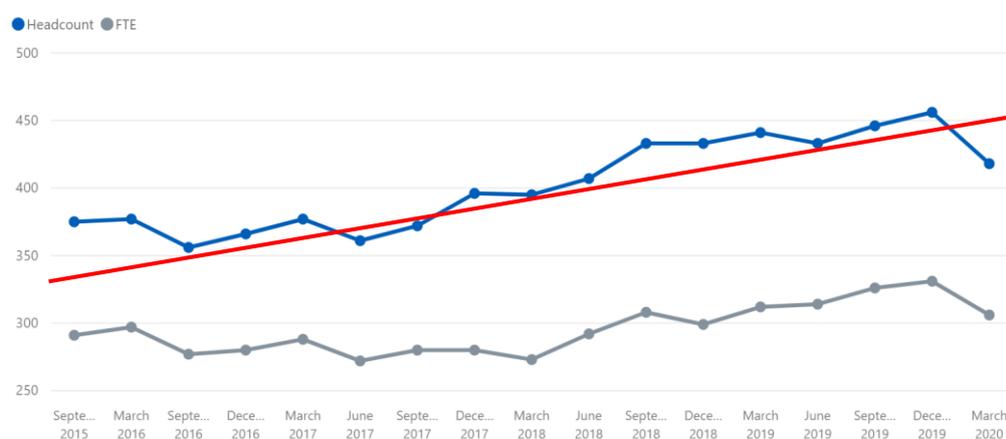

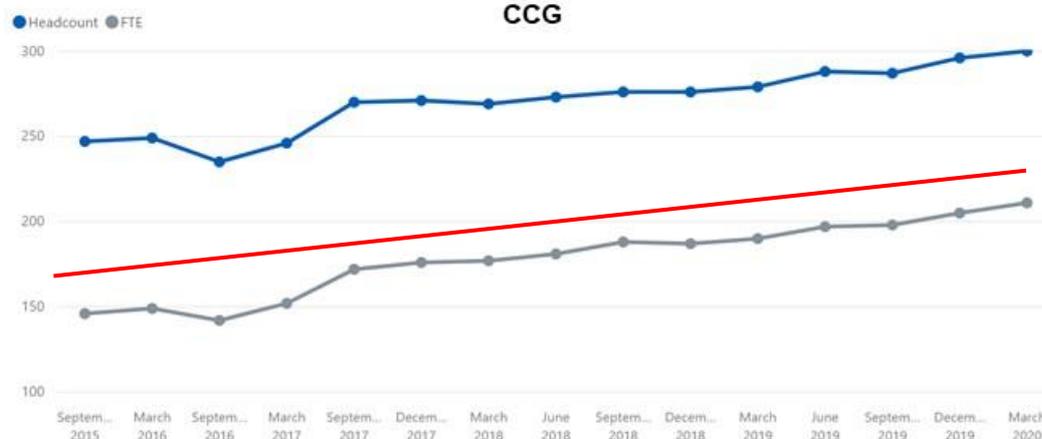

180. The Board also heard from the Victoria PCN that the increase in the use of video and phone consultations has been remarkable during Covid-19. Patients have been able to join both surprisingly easily, including the older population. Patients are asked to come to follow up physical appointments where necessary, such as if a dermatology issue is not clear. Patients have been very positive and find them far more convenient as they can no longer need to drop their normal life to come to a GP practice and can instead go into a private room in their own home. There have been no complaints from any patients.

181. The Board has seen evidence that the headcount of GPs and other staff involved in Direct Patient Care has been consistently rising over the last five years.

---

<sup>35</sup> The Future of Eastbourne Station Health Centre Pre-Consultation Business Case (PCBC), EHS CCG, 29 January 2020. p.48

**Direct Patient Care staff numbers between 2015 and 2020 across East Sussex CCG**

182. The Board also heard that the Victoria PCN has successfully recruited two new GPs and is in the process of recruiting a further two. The PCN will be providing additional community based services and is also recruiting more Direct Care staffs such as paramedics and ANPs, who are very well trained and provide care for people with less severe needs.

### *Impact on patients*

183. The CCG described some of the assistance that would be made available for patients ahead of and during the dispersal:

- two months prior to closure there will be Care Navigators present at the Eastbourne Station Health Centre will be able to assist patients
- The CCG will engage with PPGs to ensure they are aware.
- If patients want to attend an alternative GP practice to the one that they have been allocated to and it has a capped list, they can contact the CCG to ensure they are registered.

184. The CCG agreed that it can feel counterintuitive and unsettling for patients during a transitional period, but the CCG is confident they will be transferred to more integrated practice with a wider range of services available to them that will be beneficial to their outcomes. A normal GP practice delivering GMS contract services and those in the PCN DES contract, should have a range of support staff recruited via the allied role reimbursement scheme and can provide a wider range of support to patients.

### *Assistance to homeless and rough sleepers*

185. The CCG identifies 18 patients on the Eastbourne Station Health Centre GP list who are registered as homeless or rough sleepers. The RSI facilitated 51 new GP registrations for rough sleepers between October 2018 and December 2019 across Eastbourne. The Care & Protect service also supports homeless and rough sleepers to register at local practices across Eastbourne. Both services may have registered homeless and rough sleepers at the Eastbourne Station Health Centre.

186. The Board heard from the RSI concern that if the Eastbourne Station Health Centre is closed and its GP list is dispersed then there is a high chance that rough sleepers will not use the GP practice they are allocated if it is not in the town centre.

187. In response to concerns about homeless patients not being registered in the town centre, the Board heard that:

- The Care & Protect service supports homeless and rough sleepers to register at any local practice across Eastbourne
- The CCG has said if the Eastbourne Station Health Centre were to close, the homeless and rough sleepers registered there would be supported in the same way to re-register at alternative practices.
- The local Salvation Army has agreed that people with no fixed address are able to register using the Salvation Army address to receive correspondence on their behalf, which is in the town centre.
- The Victoria PCN has capacity to take on homeless patients.
- The ALPS Group PCN has many patients registered at the Seaside Health Centre already and there is no reason why this cannot continue. They are registered at all other practices in the ALPS PCN area too.

### *Comments*

188. The Board notes the increased capacity and funding of the GP practices within the Eastbourne Central PCN and assurance from the PCN Clinical Director that the practices have sufficient capacity to absorb the list, as well as the additional recruitment of GPs achieved in recent months. The new GP practice in Old Town also appears to be well equipped, provide a full range of services, be reasonably accessible and potentially well staffed by the time it opens next year.

189. The Board would expect there to be proactive assistance offered to those on the GP list who need help finding a new GP practice. The Board notes that there is a large percentage of patients (38%) who do not have English as a first language and would expect the necessary additional assistance is provided for this group, as well as for homeless and another other disadvantaged people who may need additional assistance. This includes both via communications and the Care Navigators.

190. The CCG should also assist using its procedure to help residents find a new GP practice in the town centre if they wish to remain there, particularly those living nearby who are likely to be from more deprived areas or are homeless.

191. The CCG should liaise with the GP Federations and RSI, who provide a GP registration assistance to homeless and rough sleepers, to ensure it is clear where homeless patients will be registered in the future, including those currently registered at the Eastbourne Station Health Centre. Ideally these should be GP practices in the town centre.

192. The CCG should continue to facilitate the Victoria PCN to find a suitable location for a branch surgery in the town centre.

#### **Recommendation 7**

**If the decision is taken to close the Eastbourne Station Health Centre, the CCG should ensure that assistance is provided to help people register at a new GP practice. This includes:**

- **Ensure Care Navigators and letters to patients advise patients that the local practice they have been allocated will have a full range of primary care services available.**
- **Ensure Care Navigators and any letters to patients explain patient choice and that people may choose a practice in the town centre or nearby to where they live.**
- **Ensure the CCG Allocations team is able to assist with the potential influx of contact from patients registering at new practices and can help patients register at a preferred practice where it has a patient cap in place.**
- **Ensure that the homeless patients registered at the Eastbourne Station Health Centre are all registered at new practices elsewhere in the town centre.**
- **Ensure that the Care and Protect service and RSI can register homeless and rough sleepers at alternative town centre practices in the future.**

# Appendix 1

## Review Board meeting dates

The Review Board met on 9 May and 29 May 2018 to consider the initial proposals and speak with witnesses. Following the pause and subsequent review of proposals by the CCGs in June 2018, HOSC also agreed to pause the work of the Review Board own review. HOSC recommenced the Review Board in 27 September 2018 and received further updates from the CCG on 7 March and 26 July 2019, whilst the CCG continued to redevelop its plans. It then met on 23 January 2020 to restart its review process just ahead of the commencement of the CCG's public consultation on the revised proposals. Further planned meetings were postponed, however, due to the Covid-19 outbreak and pause of the CCG's public consultation. Once the CCG proposed to restart the public consultation, the Review Board restarted its own process and met again on 24 July, 26 August, 28 August and 3 September 2020.
